

- Start the engine and slowly and carefully lower the basic boom 1a to storageage the pin 10 of the boom 1a from the retainer hook 17 of the basic boom 1a.
- Slowly and carefully travel back the excavator to drive out the basic boom from the attachment.

Fig. 3-114 Removal of the earthmoving attachment - phase 2

1a	Boom	4a	Support	17	Retainer hook
1b	Basic boom	18	Upper pin		

Installation

- Bring the excavator exactly in front of the attachment to be attached.
- The undercarriage of the excavator must always be lined up as precisely as possible with the attachment to be installed, so that the excavator does not exert any lateral force onto the stored attachment during the forward motion.
- Drive forward slowly and carefully so that the basic boom 1c inserts into the fork of the main boom 1a.
- Slowly lift the basic boom 1c so its retainer hook 17 fits around the pin 10 of the main boom 1a.
- Reconnect all lubrication and hydraulic lines between basic boom 1c and main boom 1a (quick couplings).
- Reconnect all the existing electrical connectors.
- Lightly raise the basic boom 1c to free the support 4a from the weight of the attachment and slide the lateral parts of the support out of the support pin 6 of the boom and remove the support 4a.
- Slowly lift the basic boom 1c until the bores for the pin 6 in the main boom 1a and in the basic boom 1c are aligned.
- Insert the lower pin 6. (For machines equipped with a quick change device between basic boom and boom, refer to the corresponding chapter in this manual).

3.7.3 Removal and installation of attachments in complete storing frameworks

As an alternative to the empty of single supporting benches described in the previous pages, the attachments can, at customer's request, be folded down into complete supporting frames for the storage or the transport.

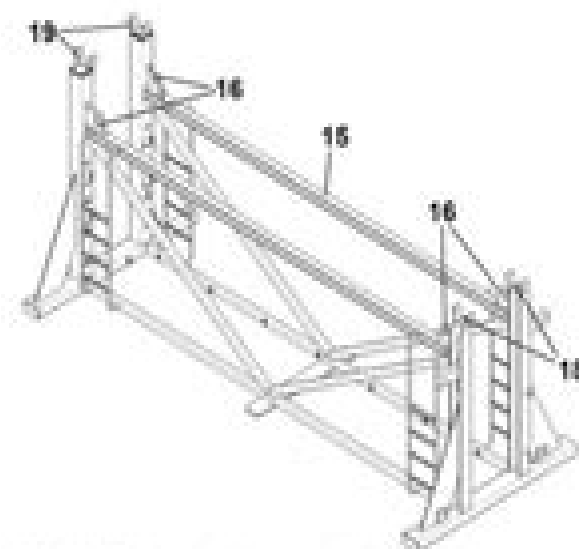

Fig. 3-115 Storing framework for the storage of a demolition attachment

15	Storing framework	18	Lifting points
16	U-shaped supporting strap rear	19	U-shaped supporting strap front

These frameworks presents several advantages in comparison with the supporting benches:

- an optimal stability for the storage and during transport.
- a simplified loading procedure into a low bed truck, since the lifting points are integrated in a good accessible way in the frameworks, and also due to the fact that the supporting structure for the whole working attachment consists of only one part.
- the mounting and dismantling of separate fixing parts is no longer necessary during the installation and removal operation of the attachment, since the attachment is simply put down into the U-shaped supporting straps 16 and 19.

Note

The works for the installation and removal of the working attachments stored in the frameworks must be performed in the same sequences as for the installation and removal on single benches, which are described in the previous pages.

Storage in a storing framework "simple"

Note

During the storage of a demolition attachment in a storing framework, the demolition boom 1a and the side 5 of the attachment must be linked together using the connecting rod 11, just as when the attachment is stored on single benches.
