*Current Topics in Malaria* Alfonso J. Rodriguez-Morales, 2016-11-30 Malaria causes hundreds of thousands of human deaths every year and the World Health Assembly has made it a priority To help eliminate this disease there is a pressing need for the development and implementation of new strategies to improve the prevention and treatment due in part to antimalarial drug resistances This chapter focuses on two strategies to inactivate the malaria parasite in blood which are photodynamic therapy PDT and inhibition of hemozoin formation The PDT strategy permits either a control of the proliferation of mosquito larvae to develop some photolarvicides for the prevention or a photoinactivation of the malaria parasite in red blood cells RBCs to minimize infection transmission by transfusion The inhibition of hemozoin formation strategy is used for the development of new antimalarial drug by understanding its formation mechanism

Malaria Journal, 2002

**Journal of Tropical Medicine and Hygiene**, 1901

**Malaria**, 2019-12-11 Each year malaria kills almost half a million people despite the fact that it is a preventable and curable disease Malaria has a direct correlation with economic loss due to the need for people to take time off work and the cost of hospital treatments Undertaking decisive measures to combat malaria is necessary This book aims to present current approaches in the treatment of malaria It will be a guide to those working in malaria endemic regions and cover both diagnosis and treatment It will also be useful for medical workers in western countries where malaria is not as common Considering that malaria causes morbidity and mortality more especially among children below five years of age and pregnant mothers it is therefore imperative that people from all walks of life should join hands to address this public health problem
