Overview and Goals Wireless communication technologies are undergoing rapid advancements The last few years have experienced a steep growth in research in the area of wireless sensor networks WSNs In WSNs communication takes place with the help of spatially distributed autonomous sensor nodes equipped to sense specific information WSNs especially the ones that have gained much popularity in the recent years are typically ad hoc in nature and they inherit many characteristics features of wireless ad hoc networks such as the ability for infrastructure less setup minimal or no reliance on network planning and the ability of the nodes to self organize and self configure without the involvement of a centralized network manager router access point or a switch These features help to set up WSNs fast in situations where there is no existing network setup or in times when setting up a fixed infrastructure network is considered infeasible for example in times of emergency or during relief operations WSNs find a variety of applications in both the military and the civilian population worldwide such as in cases of enemy intrusion in the battlefield object tracking habitat monitoring patient monitoring detection and so on Even though sensor networks have emerged to be attractive and they hold great promises for our future there are several challenges that need to be addressed Some of the well known challenges are attributed to issues relating to coverage and deployment scalability quality of service size computational power energy efficiency and security **Kliatt**

material from a range of common law jurisdictions as well as the jurisprudence of international courts The current law on when damages can be obtained and how they are assessed is set out in detail and analysed comprehensively The theoretical foundations of human rights damages are examined with a view to enhancing our understanding of the remedy and resolving the currently troubled state of human rights damages jurisprudence The book argues that in awarding damages in human rights cases the courts should adopt a vindictory approach modelled on those rules and principles applied in tort cases when basic rights are violated Other approaches are considered in detail including the current mirror approach which ties the domestic approach to damages to the European Court of Human Rights approach to monetary compensation an interest balancing approach where the damages are dependent on a judicial balancing of individual and public interests and approaches drawn from the law of state liability in EU law and United States constitutional law The analysis has important implications for our understanding of fundamental issues including the interrelationship between public law and private law the theoretical and conceptual foundations of human rights law and the law of torts the nature and functions of the damages remedy the connection between rights and remedies the intersection of domestic and international law and the impact of damages liability on public funds and public administration The book was the winner of the 2016 SLS Peter Birks Prize for Outstanding Legal Scholarship and the 2018 Inner Temple New Authors Book Prize
