2. Which of the following components of the control system is responsible for detecting any change and motor the value of variables?

- a. Control Center
- b. Stimulus
- c. Effector
- d. Receptor

Answer: D Most negative feedback mechanisms have three components in control system: (1) A receptor monitors the value of variables such as body temperature, by detecting stimuli; (2) a control center, such as part of the brain, determines the set point for the variable and receives input from the receptor about the variable; and (3) an effector, such as sweat glands, can change the value of the variable when directed by the control center. A changed variable is a stimulus because it initiates a homeostatic mechanism.
