

P0093 A serious leak in the fuel system, possible causes of the problem:  
failure or incorrect data coming from the fuel pressure controller;  
mechanical failure of the system, lack of tightness;  
damage to wires or cable connector.

To identify the problem should:

- check all of these items;
- make sure that the fuel is drained into the return line;
- check for possible fuel leaks, as well as the fuel pump (it may be clogged).

P1000 This DTC indicates that OBD2 Diagnostic Interface Testing has not been completed. If the problem is due to user actions (starting the engine, turning off the program or the diagnostic scanner), then the testing process must be repeated. Otherwise, verification of the software component of the control unit is required.

### **MAZDA Exhaust system DTC**

P0401 Low efficiency recorded during the operation of the exhaust gas recirculation system. If error P0401 occurs, it is necessary to test the operation of the control module, as well as the integrity of all lines for wear and leakage as a result of mechanical damage.

P1402 Malfunctions in the exhaust gas recirculation system. The on-board computer reports a clogged orifice plate. The problem should be sought in the calibration hole.
