## **Laboratory Production Of Cattle Embryos:**

Laboratory Production of Cattle Embryos Ian Gordon, 1994-01-01 This book is devoted to technologies which are still developing but which are likely to take over from artificial insemination as the farmer's main tool to produce large numbers of high quality calves Cattle oocyte recovery in vitro fertilization and embryo transfer are techniques which permit cows to produce calves of a genetic quality and composition quite unlike that of the surrogate mother herself They also enable cows under suitable conditions to produce two calves rather than one There are now over one hundred laboratories involved in producing cattle embryos by in vitro maturation and fertilization of oocytes Indeed the author's own work has led to the establishment of a biotechnology company which has commercialized the production process Based on a comprehensive review of the literature this book presents current knowledge of the laboratory production of cattle embryos and the way in which such embryos might be used in commercial application and research It is shown that the processes may be the starting point for many other developments in cattle breeding and in the future be applied to other farm animals and also humans The book written by one of the world's leading authorities on the subject is a major reference work for those in the academic and commercial sectors concerned with animal breeding reproduction and biotechnology

**Laboratory Production of Cattle Embryos** Ian Gordon, 2003-01-01 3000 new references added since the first edition Gives information necessary to produce embryos totally through in vitro techniques Shows commercial applications of embryo and oocyte research Cattle remain at the forefront of many new developments in reproductive technology and what can be done for the cow today will later be applicable to other farm livestock and perhaps humans This new edition reviews the considerable advances and issues in embryo production technology based on reports since the first edition in 1994 This is a must have volume for those who own the first edition and in itself an incredibly informative text

**Laboratory Production of Cattle Embryos** Ian R. Gordon, 2003-01-01 Cattle oocyte recovery and maturation in vitro fertilization and embryo cryopreservation and transfer are techniques that permit cows to produce calves of a genetic quality and composition quite unlike that of the surrogate mother herself The same techniques are also basic to progress in cattle cloning and the production of transgenes The new edition of this book reviews advances in embryo production technology based on some 3500 reports that have appeared since the first edition was published in 1994 The work emphasizes the common ground existing between those working in cattle and human embryology and the opportunities for gaining new knowledge and a greater understanding of the reproductive processes in the two species

**Fertility in the High Producing Dairy Cow** M. G. Diskin, 2001 Milk Composition, Production and Biotechnology R. A. S. Welch, 1997 Major changes have recently taken place in the value attached to components of milk Although approximately half the energy in milk is contained in fat fat is rapidly decreasing in value relative to protein This has come about because of the increased availability of competitively priced plant derived edible oils and because of the perceived health problems associated with animal fat in the human diet Such changes have major implications for the dairy sector particularly in developed countries Against this background this book presents a timely review of developments in milk production and consumption of changes in milk component values and of the opportunities that biotechnology provides to alter the composition of and add value to milk on the farm The subject coverage is very broad ranging from nutritional aspects of pastures and forages to rumen microbiology genetics and reproductive technologies milk biochemistry and environmental implications It is based on a conference held in Wellington New Zealand in February 1996 and sponsored by the OECD and AgResearch Contributors include leading research workers from North America Europe Japan Australia and New Zealand It provides an invaluable overview of the subject suitable as a reference book for advanced students researchers and advisers in dairy science as well as related disciplines such as grassland nutritional and food sciences
