Mathworks David Frieder,1991 **Linear Algebra for the 21st Century** Anthony Roberts,2020-10-09 Customarily much of traditional mathematics curricula was predicated on by hand calculation However ubiquitous computing requires us to refresh what we teach and how it is taught This is especially true in the rapidly broadening fields of Data Mining and Artificial Intelligence and also in fields such as Bioinformatics which all require the use of Singular Value Decomposition SVD Indeed SVD is sometimes called the jewel in the crown of linear algebra Linear Algebra for 21st Century Applications adapts linear algebra to best suit modern teaching and application and it places the SVD as central to the text early on to empower science and engineering students to learn and use potent practical and theoretical techniques No rigour is lost in this new route as the text demonstrates that most theory is better proved with an SVD In addition to this there is earlier introduction development and emphasis on orthogonality that is vital in so many applied disciplines throughout science engineering computing and increasingly within the social sciences To assimilate the so called third arm of science namely computing Matlab Octave computation is explicitly integrated into developing the mathematical concepts and applications A strong graphical emphasis takes advantage of the power of visualisation in the human brain and examples are included to exhibit modern applications of linear algebra such as GPS text mining and image processing Active learning is encouraged with exercises throughout that are aimed to enhance lectures quizzes or flipped teaching [MATLAB Programming for Engineers](#) Stephen J. Using Noise to Characterize Vision Rémy Allard, Jocelyn Faubert, Denis G. Pelli, 2016-03-02 Noise has been widely used to investigate the processing properties of various visual functions e g detection discrimination attention perceptual learning averaging crowding face recognition in various populations e g older adults amblyopes migrainers dyslexic children using noise along various dimensions e g pixel noise orientation jitter contrast jitter The reason to use external noise is generally not to characterize visual processing in external noise per se but rather to reveal how vision works in ordinary conditions when performance is limited by our intrinsic noise rather than externally added noise For instance reverse correlation aims at identifying the relevant information to perform a given task in noiseless conditions and measuring contrast thresholds in various noise levels can be used to understand the impact of intrinsic noise that limits sensitivity to noiseless stimuli Why use noise Since Fechner named it psychophysics has always emphasized the systematic investigation of conditions that break vision External noise raises threshold hugely and selectively In hearing Fletcher used noise in his famous critical band experiments to reveal frequency selective channels in hearing Critical bands have been found in vision too More generally the big reliable effects of noise give important clues to how the system works And simple models have been proposed to account for the effects of visual noise As noise has been more widely used questions have been raised about the simplifying assumptions that link the processing properties in noiseless conditions to measurements in external noise For instance it is usually assumed that the processing strategy or mechanism used to perform a task and its processing properties e g filter tuning are unaffected by the addition of external noise Some have suggested that the processing properties could change with the addition of external noise e g change in filter tuning or more lateral masking in noise which would need to be considered before drawing

conclusions about the processing properties in noiseless condition Others have suggested that different processing properties or mechanisms could be solicited in low and high noise conditions complicating the characterization of processing properties in noiseless condition based on processing properties identified in noise conditions The current Research Topic probes further into what the effects of visual noise tell us about vision in ordinary conditions Our Editorial gives an overview of the articles in this special issue
