to find specialized formulae recipes and material data pooled from the lifetime experience of many of the world's most able practitioners of the art and science of accelerators. The seven chapters include both theoretical and practical matters as well as an extensive glossary of accelerator types. Chapters on beam dynamics and electromagnetic and nuclear interactions deal with linear and nonlinear single particle and collective effects including spin motion, beam environment, beam-beam, electron beam-ion and intrabeam interactions. The impedance concept and related calculations are dealt with at length as are the instabilities due to the various interactions mentioned. A chapter on operational considerations including discussions on the assessment and correction of orbit and optics errors, real-time feedbacks, generation of short photon pulses, bunch compression, phase space exchange, tuning of normal and superconducting linacs, energy recovery linacs, free electron lasers, cryogenic vacuum systems, steady state microbunching, cooling, space charge compensation, brightness of light sources, collider luminosity optimization and collision schemes, machine learning, multiple frequency rf systems, FEL seeding, ultrafast electron diffraction and Gamma Factory. Chapters on mechanical and electrical considerations present material data and important aspects of component design including heat transfer and refrigeration. Hardware systems for particle sources, feedback systems, confinement including undulators and acceleration, both normal and superconducting, receive detailed treatment in a sub-systems chapter, beam measurement and apparatus being treated therein as well. A detailed name and subject index is provided together with reliable references to the literature where the most detailed information available on all subjects treated can be found.

Mechanics and Electrodynamics of Magneto- and Electro-elastic Materials Raymond Ogden, David Steigmann, 2011-05-25. This volume presents a state of the art overview of the continuum theory of both electro- and magneto-sensitive elastomers and polymers which includes mathematical and computational aspects of the modelling of these materials from the point of view of material properties and in particular the smart material control of their mechanical properties.

Host-Guest Chemistry Brian D. Wagner, 2020-10-26. This textbook addresses the chemical and physicochemical principles of supramolecular host-guest chemistry in solution. It covers the thermodynamics and dynamics of inclusion and highlights several types of organic hosts. Various applications of host-guest chemistry in analytical and environmental chemistry as well as pharmaceutical and chemical industry demonstrate the versatile usability of molecular cages.
