Katopodes, 2018-10-31 Free Surface Flow Computational Methods presents a detailed analysis of numerical schemes for shallow water waves It includes practical applications for the numerical simulation of flow and transport in rivers and estuaries the dam break problem and overland flow Closure models for

turbulence such as Reynolds Averaged Navier Stokes and Large Eddy Simulation are presented coupling the aforementioned surface tracking techniques with environmental fluid dynamics While many computer programs can solve the partial differential equations describing the dynamics of fluids many are not capable of including free surfaces in their simulations Provides numerical solutions of the turbulent Navier Stokes equations in three space dimensions Includes closure models for turbulence such as Reynolds Averaged Navier Stokes and Large Eddy Simulation Practical applications are presented for the numerical simulation of flow and transport in rivers and estuaries the dam break problem and overland flow Parallel Computing is Everywhere Sanzio Bassini, Gerhard R. Joubert, Frans Peters, 2018-03-15 The most powerful computers work by harnessing the combined computational power of millions of processors and exploiting the full potential of such large scale systems is something which becomes more difficult with each succeeding generation of parallel computers Alternative architectures and computer paradigms are increasingly being investigated in an attempt to address these difficulties Added to this the pervasive presence of heterogeneous and parallel devices in consumer products such as mobile phones tablets personal computers and servers also demands efficient programming environments and applications aimed at small scale parallel systems as opposed to large scale supercomputers This book presents a selection of papers presented at the conference Parallel Computing ParCo2017 held in Bologna Italy on 12 to 15 September 2017 The conference included contributions about alternative approaches to achieving High Performance Computing HPC to potentially surpass exa and zetascale performances as well as papers on the application of quantum computers and FPGA processors These developments are aimed at making available systems better capable of solving intensive computational scientific engineering problems such as climate models security applications and classic NP problems some of which cannot currently be managed by even the most powerful supercomputers available New areas of application such as robotics AI and learning systems data science the Internet of Things IoT and in car systems and autonomous vehicles were also covered As always ParCo2017 attracted a large number of notable contributions covering present and future developments in parallel computing and the book will be of interest to all those working in the field **The Electrical Journal** ,1913 **The New York Daily Tribune Index** ,1896 **Weather Disasters in the South China Sea and Surrounding Regions: Observations, Theories, Data Assimilation, and Numerical Forecasting** Jianjun Xu, Julian Wang, Sheng Chen, Chunlei Liu, 2023-08-28 The South China Sea SCS is the linkage between the western Pacific Ocean and the Indian Ocean Its weather climate variations are regarded as an important factor influencing social and economic development The SCS and its surrounding regions suffer from various weather disasters e g typhoons extreme rainfall sea fog severe convection tornado and wind hazards which are serious threats to life and property As such accurate nowcasting is life critical in this area However it is still a worldwide challenge to improve the forecast accuracy due to less understanding of the formation mechanism evolution pattern internal structure and physical processes As a dominant physical process the ocean atmosphere interaction plays an important role in affecting

the weather climate system and disasters over the SCS and surrounding regions particularly vertical mixing between the interface of ocean and atmosphere This research topic aims to provide an in depth understanding of the physical processes related to these disasters applications of data assimilation and the development of forecasting techniques which are essential to enhance disaster prevention and mitigation capabilities In addition in depth research of these disasters and their impacts could help to uncover the hazard causing characteristics and establish a corresponding risk assessment system
