

Carburatore

Quando il carburatore è mal regolato le prestazioni del motore diminuiscono ed è quindi importante che la carburazione sia sempre perfettamente regolata. La carburazione deve essere regolata solo quando il motore è a temperatura di normale funzionamento.

1. Regolare il regime del minimo a 1200 giri al minuto per mezzo della vite indicata a fianco ①.
2. Ruotare la vite ② in modo da ottenere una più uniforme e più elevata velocità di rotazione.
3. Regolare nuovamente la vite ② qualora sia necessario riportare il regime di rotazione al valore previsto di 1200 giri.

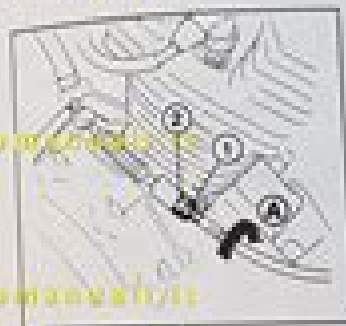

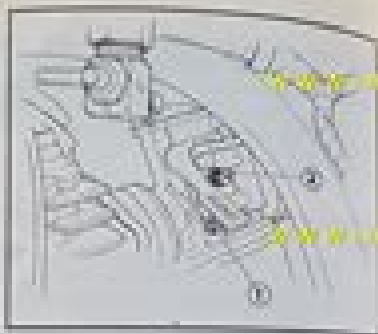

NOTA: Il cattivo funzionamento del motore agli alti regimi può essere causato da difetti di accensione o di distribuzione ed è quindi necessario determinare la causa dell'insuccesso prima di agire sugli organi di taratura del carburatore.

Filtro del carburante

Nel rubinetto del serbatoio è incorporato un filtro del carburante.

L'accumulo di sporcizia e di depositi nel filtro può causare inconvenienti. È opportuno quindi procedere a periodica pulizia.

Dopo aver svuotato il serbatoio, svitare il dado di fissaggio del rubinetto e rimuoverlo con cautela. Lavare bene con solvente o benzina tutti i componenti e procedere quindi al rimontaggio. Agitare il rubinetto (leva verso il basso) e controllare che non vi siano perdite.

Controllo e registrazione della frizione

Registrazione la frizione in modo che tirando la leva essa "stacchi" correttamente. Quando ciò non si verifica il motore può spegnersi innestando la marcia da fermo e la moto tenderà a muoversi anche con la leva della frizione tirata a fondo. Inoltre l'innestamento della marcia avverrà con difficoltà e rumorosamente.

Al contrario se la frizione non "stacca" bene si avranno scattamenti e la moto non accelererà proporzionalmente alla accelerazione del motore. Per ottenere il migliore funzionamento della moto e le massime prestazioni è necessario registrare la frizione secondo le norme che seguono.
