J And K Christmas 2014:

Bio-orthopaedics Alberto Gobbi, João Espregueira-Mendes, John G. Lane, Mustafa Karahan, 2017-05-26 This book introduces the exciting field of orthobiology which will usher in a new array of therapeutic approaches that stimulate the body's natural resources to regenerate musculoskeletal tissues damaged by trauma or disease. The book addresses a range of key topics and discusses emerging approaches that promise to offer effective alternatives to traditional treatments for injuries to bone, cartilage, muscles, ligaments and tendons. It explains in detail how a variety of innovative products including biomaterials, growth factors and autogenous cells together provide the basis for the regeneration of these musculoskeletal structures and how recent scientific progress has created unique opportunities to address pathological situations that until recently have been treated with unsatisfactory results. The authors are experts from across the world who come together to provide a truly global overview. The book is published in collaboration with ISAKOS. It will be invaluable for all with an interest in this area of medicine which has already attained huge popularity in Orthopaedics and Sports Medicine and has also attracted the attention of the lay public.

Regenerative Medicine in Sports and Orthopaedics Alberto Gobbi, Norimasa Nakamura, John G. Lane, Ignacio Dallo, 2025-04-28 This book offers a comprehensive overview of the rapidly evolving field of regenerative medicine including key breakthroughs in clinical therapies. It is further aimed at facilitating ethical, high quality research in Sports Medicine and Orthopaedics. Set apart by its unique structure, it bridges the gap between basic science and practical applications. Divided into three distinct sections, it begins by laying a strong foundation delving into the biological and molecular underpinnings of regenerative medicine including stem cells, growth factors, gene editing, tissue engineering, nanotechnology and bio-manufacturing. The second section takes readers on a journey into the clinical applications of regenerative medicine offering valuable guidance and insights for practitioners. The third section, dedicated to future trends and bio-materials applications, sheds new light into the evolving landscape of this field. By providing a structured, comprehensive and up-to-date resource, it equips researchers, clinicians, residents and students with the knowledge needed to make a positive impact in this ever-expanding domain. Written in collaboration with ISAKOS, this volume serves as an invaluable tool in advancing readers' understanding and practice in the field.

Functional Imaging in living Plants - Cell Biology meets Physiology Alex Costa, Markus Schwarzländer, George R Littlejohn, Tobias Meckel, 2015-05-08 The study of plant cell physiology is currently experiencing a profound transformation. Novel techniques

allow dynamic in vivo imaging with subcellular resolution covering a rapidly growing range of plant cell physiology. Several basic biological questions that have been inaccessible by the traditional combination of biochemical, physiological and cell biological approaches now see major progress. Instead of grinding up tissues, destroying their organisation or describing cell and tissue structure without a measure for its function, novel imaging approaches can provide the critical link between localisation, function and dynamics. Thanks to a fast growing collection of available fluorescent protein variants and sensors along with innovative new microscopy technologies and quantitative analysis tools, a wide range of plant biology can now be studied in vivo, including cell morphology, migration, protein localization, topology, movement, protein-protein interaction, organelle dynamics as well as ion, ROS, redox dynamics. Within the cell, genetic targeting of fluorescent protein probes to different organelles and subcellular locations has started to reveal the stringently compartmentalized nature of cell physiology and its sophisticated spatiotemporal regulation in response to environmental stimuli. Most importantly, such cellular processes can be monitored in their natural 3D context, even in complex tissues and organs, a condition not easily met in studies on mammalian cells. Recent new insights into plant cell physiology by functional imaging have been largely driven by technological developments such as the design of novel sensors, innovative microscopy imaging techniques and the quantitative analysis of complex image data. Rapid further advances are expected which will require close interdisciplinary interaction of plant biologists with chemists, physicists, mathematicians and computer scientists. High throughput approaches will become increasingly important to fill genomic data with life on the scale of cell physiology. If the vast body of information generated in the omics era is to generate actual mechanistic understanding of how the live plant cell works, functional imaging has enormous potential to adopt the role of a versatile standard tool across plant biology and crop breeding. We welcome original research papers, methodological papers, reviews and mini reviews with particular attention to contributions in which novel imaging techniques enhance our understanding of plant cell physiology and permit to answer questions that cannot be easily addressed with other techniques.

The Action Plan for Australian Birds 2020 Stephen T. Garnett, G Barry Baker, 2021-12. The Action Plan for Australian Birds 2020 is the most comprehensive review of the status of Australia's avifauna ever attempted. The latest in a series of action plans for Australian birds that have been produced every decade since 1992, it is also the largest. The accounts in this plan have been authored by more than 300 of the most knowledgeable bird experts in the country and feature far more detail than any of the earlier plans. This volume also includes accounts of over 60 taxa that are no longer considered threatened, mainly thanks to sustained conservation action over many decades. This extensive book covers key themes that have emerged in the last decade, including the increasing impact of climate change as a threatening process, most obviously in Queensland's tropical rainforests where many birds are being pushed up the mountains. However, the effects are also indirect, as happened in the catastrophic fires of 2019-20. Many of the newly listed birds are subspecies confined to Kangaroo Island where fire destroyed over half the population. But there are good news.

stories too especially on islands where there have been spectacular successes with predator control Such uplifting results demonstrate that when action plans are followed by action on the ground threatened species can indeed be recovered and threats alleviated *The Role of Environmental Stressors in Neurocritical Patient Outcomes* Luis Rafael
