unspoken pitfalls of the admissions process This book attempts to break down some of those barriers It focuses on every component of the medical school application process It differs from the many other books written on this subject by taking an experiential approach We believe that the best way to learn about medical school acceptance is to garner advice from those who have recently achieved that milestone as well as from individuals in related professions who can provide valuable insights This guide is divided into ten chapters each of them covering an important step along a premed's journey While this book has a focus on North America we have written this guide with a global audience in mind as many of the concepts discussed are relevant to any medical school application process As such although the key components of the application process to medical school remain the same across various training systems not every chapter will be equally relevant to every reader Typically an application is composed of academic performance volunteer activities research projects medical college admission test performance and extracurricular activities We have combined the prescriptive style of most books of this type with detailed stories of how real people navigated their personal journeys to reach successful outcomes This guide shares a broad range of perspectives on what it takes and means to be a physician We are more convinced than ever that amongst applicants who have the academic credentials those who seek mentors and network early within the profession be it through family or friend circles and those who learn from their mistakes are accepted earlier This book will help you in that journey towards medical school acceptance and an exciting career in medicine Jiayi Hu MD Manveen Puri MD CCFP Sameer Masood MD Aly Madhavji CPA CA CMA CIM      **Social Foundations of Behavior for the Health Sciences** Ginny

Garcia-Alexander,Hyeyoung Woo,Matthew J. Olsen, 2024-08-10 Medical schools have increasingly incorporated the humanities and social sciences into their teaching seeking to make future physicians more empathetic and more concerned with equity In practice however these good intentions have not translated into critical consciousness Humanities and social sciences education has often not only failed to deliver on its promise but even entrenched the inequalities that the medical profession set out to address Lauren D Olsen examines how U S medical school

faculty conceived designed and implemented their vision of education tracing the failures of curricular reform She argues that the way medical students encounter humanities and social sciences material in practice has served to reinforce the status quo by teaching them to individualize systemic problems Students learn to avoid advocacy critique and attention to structural inequalities while also gathering that it will be up to them to find coping strategies for problems from burnout to systemic racism Olsen pinpoints the limitations of how clinical faculty understand the humanities and social sciences arguing that in structuring and teaching courses they assumed reinforced and glorified a white elite model of the medical profession Showing how deeply intertwined professional and social identities are in medical education Curricular Injustice has significant implications for how occupations organizations and institutions shape understandings of inequality
