### **Global Sustainability, Cultural Perspectives and Challenges for Transdisciplinary Integrated Research** Benno

Werlen, 2015-05-28 This book offers new perspectives of transdisciplinary research in methodological as well as theoretical respects It provides insights in the two fold bio physical and the socio cultural global embeddedness of local living conditions on the basis of selected empirical studies from Latin America Asia Africa Australia and Europe The theoretical foundations of ecological research and sustainability policies were developed at the end of the nineteenth century They are largely based on investigations of living spaces and the evolution and differentiation of varied life forms This perspective is embedded in the practical and theoretical European problem situations of the past and lacks social and cultural differentiation The transformation of spatial and natural relations as a result of the globalization process is so radical that new theories are needed to solve 21st century ecological problems Moreover in view of the lack of an ontologically sound and promising strategy for transdisciplinary problem solving as well as an acceptable consideration of the power of cultural schemas relating to natural living s interpretations there is a strong need to focus on sustainable social practices habits and routines rather than on predominantly living spaces or eco topos This book elaborates on the transdisciplinary approach by reflecting on the theoretical heritage and a global perspective of sustainability by focusing on the primary role of a social approach in sustainability research and by putting emphasis on cultural dimension of sustainability It postulates that global sustainability is grounded in a global understanding of our everyday activities
