**Biometrics in Support of Military Operations** William C. Buhrow, 2016-11-25 Biometrics in Support of Military Operations Lessons from the Battlefield examines and evaluates recent U S military experiences in Iraq and Afghanistan in the context of the use of biometrics and related technologies The book takes a comprehensive look at how biometrics has been used to support various military operations and suggests ways that its uses can be further developed It fills a void in understanding how to incorporate biometrics by providing a guide to develop and establish formal operational roles and procedures when applying the technology Written in an informal style that makes it accessible to people who are not necessarily operators or technicians of biometrics technologies this book bridges an existing gap to better educate leaders inside and outside of the U S military on the far reaching potential of biometrics in support of tactical operations It argues that the gap between those inside and outside the military is the result of failure to document lessons learned from battle experience as well as a lack of a combined vision among the Joint Forces to fully recognize and exploit the capabilities of biometrics for enhanced future success This book fills that gap Biometrics has great potential as an effective tool if properly developed and utilized The book concludes with a look at the future of emerging applications for the military but also considers a wider range of deployment of biometrics outside the military such as in governmental organizations including foreign diplomacy Biometrics can be applied to any operational area that requires accurate and rapid identification of unknown individuals in order to support its operations and protect personnel and resources Biometrics in Support of Military Operations is an important beginning point in an emerging field for gaining understanding and better mastery of biometrics

Universities and the Purpose of Higher Education Josh Patel, 2026-01-22 This thought provoking book addresses the persistent anxieties surrounding the purpose and direction of higher education offering a nuanced historical perspective on its transformation Using Cold War Britain as a lens this book challenges the prevailing narrative that marketisation was an external imposition revealing instead how the dynamic priorities of social democratic higher education inadvertently paved the way for their own supersession Drawing on novel archival insights it explores experimental initiatives by university leaders and employers and reveals how post war public investment in universities was justified through a dual logic empowering young people to pursue their individual self interest while cultivating the ethical application of specialist

knowledge in service of liberal capitalism It goes on to show how the novel accountability frameworks they constructed intended to maximise freedom contained unstable tensions tensions that remain in today s neoliberal system Packed full of research case studies and policy implications this book interrogates the successes and failures of innovative teaching and learning practices as well as the evolving relationship between universities and industry Throughout the author offers critical insights into how liberal education might be reimaged to sustain universities in their service to the common good This is essential reading for students academics policymakers and anyone seeking to understand the moral principles underpinning higher education and their influence on its future

**China as a Twenty-First Century Naval Power** Michael A McDevitt,2020-10-15 Xi Jinping has made his ambitions for the People s Liberation Army PLA perfectly clear there is no mystery what he wants first that China should become a great maritime power and secondly that the PLA become a world class armed force by 2050 He wants this latter objective to be largely completed by 2035 China as a Twenty First Century Naval Power focuses on China s navy and how it is being transformed to satisfy the world class goal Beginning with an exploration of why China is seeking to become such a major maritime power author Michael McDevitt first explores the strategic rationale behind Xi s two objectives China s reliance on foreign trade and overseas interests such as China s Belt and Road strategy In turn this has created concerns within the senior levels of China s military about the vulnerability of its overseas interests and maritime life lines is a major theme McDevitt dubs this China s sea lane anxiety and traces how this has required the PLA Navy to evolve from a near seas focused navy to one that has global reach a blue water navy He details how quickly this transformation has taken place thanks to a patient step by step approach and abundant funding The more than 10 years of anti piracy patrols in the far reaches of the Indian Ocean has acted as a learning curve accelerator to blue water status McDevitt then explores the PLA

Navy's role in the South China Sea and the Indian Ocean. He provides a detailed assessment of what the PLAN will be expected to do if Beijing chooses to attack Taiwan, potentially triggering combat with America's first responders in East Asia, especially the U.S. Seventh Fleet and U.S. Fifth Air Force. He conducts a close exploration of how the PLA Navy fits into China's campaign plan aimed at keeping reinforcing U.S. forces at arm's length, what the Pentagon calls anti-access and area denial (A2/AD) if war has broken out over Taiwan, or because of attacks on U.S. allies and friends that live in the shadow of China. McDevitt does not know how Xi defines world class, but the evidence from the past 15 years of building a blue water force has already made the PLA Navy the second largest globally capable navy in the world. This book concludes with a forecast of what Xi's vision of a world class navy might look like in the next fifteen years when the 2035 deadline is reached. *Mental*

*Models* Kirsten M. A. Revell, Neville A. Stanton, 2017-04-07 There is a resurgence of interest in mental models due to advances in our understanding of how they can be used to help design and due to the development of practical methods to elicit them. This book brings both areas together with a focus on reducing domestic energy consumption. The book focuses on how mental models can be applied in design to bring about behaviour change, resulting in increased achievement of home heating goals, reduced waste and improved comfort. This book also offers a method to extract and apply mental models to interface design. The approach enables mental models to be applied across domains when behaviour change was sought and is validated as a useful design method. **International Best Practices of Public-Private Partnership** Robert

Osei-Kyei, Albert P. C. Chan, 2021-02-09 This book discusses how Public-Private Partnership (PPP) is practiced in developed and developing economies. Further, the book explores how PPP has become the major infrastructure procurement policy adopted by many governments globally to address the rapid increase in demand for infrastructure due to the increase in population growth. This book provides strategic measures, useful practices and information about the similarities and differences in PPP practices in developed and developing economies based on empirical evidence and case studies. This book is structured in nine chapters. The first chapter explores the basic concept of PPPs. The second chapter looks at the global development and practices of PPP, particularly from developed and developing economies perspectives. The third to the eighth chapters explore critical topics and issues in international PPP practices from developed and developing economies perspectives. The topics included in this book are governments' motivations for adopting PPPs, barriers to PPP implementation, measuring PPP project success, risk management in PPPs, causes of conflict and conflict resolution mechanisms in PPPs, and management of unsolicited proposals.
