

Maintaining Johnson/Evinrude 9.5 hp 2 cycle outboards

1964 – 1973 (Information & normal repairs)

One thing that I want to convey here is that I write only on motors that I have actually worked on, and over a period of MANY years, consisting of many THOUSANDS of hours, and then more in maintaining/updating these articles. They are motor specific, HOWEVER if you are having a diagnosis issue, my Trouble Shooting article covers MANY more aspects that may help you diagnose your issue. [CLICK HERE](#) for access to that article.

The 9.5 hp, shown below was built from 1964 to 1973, which was a the first of the low profile motor series, and is not a sleek looking motor in my opinion, with a squatty oversized motor cover and upper housing sitting on a standard 10 hp lower unit. Someone after these came out coined the phrase "Turtle Motors" for these squatty motors.

There are some similarities between this motor and the earlier motors from 6 to 10 hp but with the powerhead setting lower and a shroud around the mid-section. The lower unit appears the same as the earlier QD, 10hp series motors, but with an outer shrouded midsection. However it seems the engineers worked overtime in trying to find a place for needed parts to fit under this squatty cowling. These model numbers went from MQ-10 in 1964 through MQ-14 for 1968, then in 1969 the model # scheme changed. A 1969 was now a 9R69, a 1970 a 9R70 and so on through the 9R73 of 1973.

The understanding is that it was also basically a souped up version of the older 7.5 hp powerhead. Some experienced mechanics say the crankshaft did not stand up under heavy usage as a 9.5. But then in the early years of these motors was before the TWC-3 outboard oil came into being, so the use of ordinary automotive oil could have also have been a contributing factor because of a lesser degree of lubrication than currently available.
