Hospital-Acquired Infections Zsolt Filetoth, 2008-04-30 Hospital acquired infections HAI are complications of health care which affect on average 10 percent of patients admitted to hospital world wide They have serious public health implications by changing the quality of life of patients and sometimes causing disability or even death The purpose of this comprehensive text is to provide nurses and junior doctors with an understanding of the basics of infection control by explaining the methods employed and their purpose The book is based on lectures presented by the author at training courses for nurses and doctors and gives simple understandable and essential information that is vital knowledge for medical staff in hospitals

Infection Control in Home Care and Hospice Emily Rhinehart, 2006 An official publication of the Association for Professionals in Infection Control and Epidemiology Inc APIC the highly successful Infection Control in Home Care and Hospice helps home care providers assess the infection control needs of their

organization and develop home care infection and surveillance programs The Second Edition has been thoroughly updated and revised with the latest CDC Guidelines on infection control in home care including Hand Hygiene Prevention of IV related Infections and the 2004 Draft Isolation Guideline **Special Update--hospital Epidemiology, New Challenges and Controversies** Society of Hospital Epidemiologists of America,1989 **Infection Control & Hospital Epidemiology** Society of Hospital Epidemiologists of America,Society for Hospital Epidemiology of America,Society for Healthcare Epidemiology of America,2013 **Infection Prevention and Control in the Hospital, An Issue of Infectious Disease Clinics** Keith S. Kaye,2011-03-28 Over the past several decades infection control has become a rapidly growing multidisciplinary field of incredible importance with regard to the safety of patients and healthcare workers regulation and accreditation of healthcare facilities and finances The focus of this field has increasingly turned to prevention rather than control of hospital acquired infections This issue will bring the infectious disease specialist up to date on important topics such as hand hygiene sterilization methicillin resistant Staphylococcus aureus antibiotic stewardship and specific infections of particular concern Infection Control for Advanced Practice Professionals Denise M. Korniewicz, Ph.D, RN, FAAN,2013-10-01 Presents best practices for infection prevention and control in advanced practice Emphasizes team approach for infection control Case study provided for each chapter This professional reference combines research on the best practices for infection control in clinical settings with essential information for advanced practice nurses and physician assistants The book is organized by healthcare settings and the coverage ranges from small practice offices to large hospitals and medical institutions Each chapter is prefaced by a case study which is then incorporated into the theoretical material of the chapter as a continuing illustration This format provides a reader friendly instructional resource for advanced practice certifications and staff development From the Foreword At last is published a long needed text for advanced practice nurses APNs providing them with the information essential to the care of essentially every patient they will encounter Infection Control for Advanced Practice Professionals fills a void in the literature and recognizes the importance of a team approach to the prevention of infections in the variety of care settings in which APNs are practicing The book is particularly timely and relevant because it appropriately places infection prevention solidly within the larger patient safety movement and affirms that preventing infections is everybody s concern In acute care settings for example infection control has occasionally been relegated to the infection prevention specialist e g infection control nurse or hospital epidemiologist or the infection control committee This has shown to be ineffective in any setting It is those who touch the patients and oversee their care who must assume the responsibility for preventing untoward events such as infections While not all infections are preventable there is indeed room for improvement This comprehensive reference is a first and essential step in that direction Elaine Larson PhD RN FAAN CIC Anna C Maxwell Professor of Nursing Research Associate Dean for Research School of Nursing Professor of Epidemiology Joseph Mailman School of Public Health Columbia University Editor American Journal of Infection Control
