Cummins *Edison's Ghosts* Katie Spalding, 2023-05-16 Publishers Weekly Best Summer Reads Overturn everything you knew about history's greatest minds in this raucous and hilarious book where it turns out there's a finer line between genius and idiot than we've previously known. As Albert Einstein almost certainly never said, everyone is a genius but if you judge a fish by its ability to climb a tree it will live its whole life believing that it is stupid. So begins Katie Spalding's spunky takedown of the Western canon and how genius may not be as irrefutably great as we commonly understand. While most of us may never become Einstein, it may surprise you to learn that there's probably a bunch of stuff you can do that Einstein couldn't. And as Spalding shows, the famous prodigies she explores here were quite odd by any definition. For example, Thomas Edison, inventor of the lightbulb, believed that he could communicate with the undead and built the world's very first hotline to heaven, the Spirit Phone. Marie and Pierre Curie, famous for discovering radioactivity, slept next to a lump of radioactive material for years and strapped it to their arms to watch it burn them in real time. Lord Byron, acclaimed British poet, literally took a bear with him to university. Isaac Newton discovered the laws of gravity and motion but he also looked up at the sun without eye protection. The result? Three days of blindness. Tesla, whose scientific work led to the invention of the AC unit, fell in love with a pigeon. *Edison's Ghosts* is filled with examples of the so-called best of humanity doing to put it bluntly some really dumb shit. You'll discover stories that deserve to be told but never are, the hilarious, regrettable and downright bafflingly lesser-known achievements that never made it into our history books until now.

Junior *Mini Mathematical Murder Mysteries* Jill Whieldon, 2019-01-21 16 blackline masters to stretch and engage ages 8-11. Here's a chance for students to turn detective and apply their mathematical knowledge to solve some murder mysteries. Each of the 16 activities is intended to be a consolidation exercise covering topics such as arithmetic, algebra, shapes and simple graphs and charts. For teachers: Apart from the obvious use as homework activities, the activities can play a great role in generating mathematical discussion too. Students often work well in pairs on this sort of activity as they are able to discuss their methods and combine forces when coordinating several features of a problem. Some of the tasks require a reasonable level of logical thinking and students need to understand mathematical terms such as product, factor, prime, etc. The benefits to the students will be greatly improved if their knowledge of such mathematical language has been reinforced before attempting these murder mysteries. Success through this type of activity can increase student's confidence and make them eager to progress. Some of the tasks included here reflect wider topics met in the primary school curriculum and there is an element of general knowledge evident. Further investigative work could be generated from these, for example: In Water, can you find a river whose length would fit between the Severn and the Thames? In Romans, can you find an emperor who reigned for less than 10 years? For parents: These murder mysteries use mathematical skills learnt at school but will both reinforce knowledge and stretch students who crave a challenge. It is important to check that students have covered and understand the topic before using them. The exercises are intended to be entertaining as children love using their mathematical skills to find out
