Kennedy And The Tired Moon:

Kennedy and the Tired Moon Vanessa Jerman, 2015-01-02 Every night Kennedy stays awake gazing at the moon She wonders if it sleeps Will Kennedy ever see the tired moon sleep

The Decision to Go to the Moon John M. Logsdon, 1976 The decision announced by John F Kennedy on May 25 1961 initiating the expedition to the moon is now documented in full for future students of history To John Logsdon whose approach is that of a political scientist examining the influence of men and events on the decision making process the decision to land a man on the moon before this decade is out was wholly political rather than military although overtones of implied defense were useful in obtaining congressional support Moreover he notes it was made without the support of the scientific community although their previous research efforts were expected partially to offset this deterrent Although the success of the Russian manned orbit and the fiasco of the Bay of Pigs invasion certainly influenced the timing in the author's interpretation the Kennedy decision manages to escape the narrow definition of a public relations exhibition In Kennedy's view he emphasizes the security of the country itself was inseparably linked to a position of prestige in world opinion Nor was he a particular enthusiast of space exploration for its own rewards As he remarked to one of his advisors If you had a scientific spectacular on this earth that would be more useful say desalting the ocean or something just as dramatic and convincing as space then we would do that The thoroughness of this book as a historical record is evident throughout NASA historical records and government documents not previously released including several Presidential papers are used in the analysis and the author weaves these records together with subtleties of opinion from interviews with NASA officials and such Kennedy advisors as Theodore Sorenson McGeorge Bundy David Bell and Jerome Wiesner

Beyond the Saga of Rocket Science Walter Sierra, 2019-10-03 In *Space to Stay* the third book in the spell binding *The Saga of Rocket Science* series gives a thorough expos of the U S Apollo and Space Shuttle programs You will be there as Gus Grissom Ed White and Roger Chaffee perish and get incinerated inside their locked Apollo 1 capsule when Jim Lovell Jack Swigert and Fred Haise didn't know if they would make it back alive aboard a freezing lunar module on Apollo 13 as Neil and Buzz experienced the euphoria of being the first humans to land on the Moon while Mike Collins in lunar orbit and an anxious world looked on You'll see the same panoramic vistas of the lunar landscape and the beautiful blue marble we call Earth as the astronauts saw You are taken inside the Challenger Space Shuttle as it caught fire and disintegrated in flight What seven brave astronauts felt like as they plunged to their deaths in a basically intact crew cockpit You'll understand exactly what failed and how it failed on both the Challenger and the ill fated Columbia space shuttles and why another seven astronauts aboard the Columbia felt no pain despite their grisly annihilation during reentry

Mindsteps to the Cosmos Gerald S. Hawkins, 2002 *Mindsteps to the Cosmos* shows how modern global civilization depends on giant leaps of understanding that have been made in the past Science and technology have been inspired and formulated by the sky the cosmos in which we live Human development could not have taken place on a cloud shrouded planet Mathematics was

invented to track the movements of the sun moon and stars even though back then these were thought to be gods The space program has taken us beyond the earth and satellite systems are exploring to the ends of the visible universe This book provides the reader with algorithms to construct personal computer programs for finding the position of the moon and planets and for calculating dates through historic periods in the Egyptian as well as the old and new style calendars
