Green Chemistry Mark Anthony Benvenuto, Steven Kosmas, 2022-08-22 This volume includes several perspectives on how to connect the United Nations Sustainable Development Goals with the 12 principles of green chemistry and green chemistry education

Physiology and Medicine Ivan Y. Torshin, 2007 Several years have passed since the sequencing of the human genome and what might be called the post genomic era has begun Of course there are many different genomes and the term post genomic does not necessarily imply the human genome However it is the data encoded in the human genome that hold the promise to be of practical importance in a wide range of biomedical applications The sequencing and preliminary annotations of the human genome provided an incredible amount of the raw largely unprocessed information Coupled with the millions of publications on human physiology already available in public databases it is clear that certain informational strategies should be adopted for the retrieval analysis and representation of these data Among biological sciences bioinformatics is a specific branch that deals with managing complexities in the biological information However the bioinformatics is in no way restricted to the compilation of large databases or elaboration of sophisticated software The methods of bioinformatics can greatly assist the generation of productive hypotheses that allow subsequent experimental testing followed by confirmation or disapproval The main idea behind the present volume is not worrying about the steadily growing amounts of biomedical information or about the relative quality of it This volume as well as the entire book series is based on the purpose oriented attitude how to make a good use of this information in particular research projects

Chemistry in the Community. American Chemical Society, 2002 This volume has relevance to a wide number of courses giving a hands on introduction to chemistry in relation to community issues rather than around specific chemical concepts

Nanoscience and Nanotechnology. Proceedings of the INFN-LNF 2018 Conference Stefano Bellucci, 2020-01-03 The results presented in this volume highlight some of the most recent advances in nanoscience and nanotechnology studies from both the physical and chemical point of view with an eye also to possible engineering applications These studies demonstrate directly how effective and at the same time stimulating is implementing the cross fertilization procedure Indeed multidisciplinary research allows one to catch more easily the analogies inherent different areas of science as well as to take advantage and optimize different methods and techniques often borrowed from other research areas In the present Special Issue we included six published papers The latter contributions on the one hand are developed at the theory level and on the other hand show experimental results on the realization and experimental characterization of nanostructured systems suitable for yielding progress towards the realization of systems and devices that can ultimately lead to industrial applications The results show that recent scientific research advances in these areas may provide important steps in the direction of fostering innovation and technological development
