#### Directions:

For this assessment, you will practice using potential energy diagrams. Respond to the questions below on energy diagrams. Then submit the answers to your teacher.

Remember that you cannot copy text directly from another source and use it as your own writing. Copying the writing of someone else and passing it off as your own is plagiarism. Plagiarism is unethical, and plagiarized material will not be accepted. In addition, if you plagiarize, you may also be violating copyright protections on material. Violating copyright is illegal. Your findings must be presented in your own words, combining information from all the sources you use.

#### Questions (40 points possible)

1. Consider the potential energy diagram shown below. This graph shows the chemical potential energy in a reaction system over time. The y-axis is potential energy in kilojoules. The x-axis is the reaction progress, or time.

- A) Does this graph represent an endothermic or exothermic reaction? Explain your answer. (2 points)
- Endothermic. The products are at a higher energy level than the reactants.

**Linking the economics of water, energy, and food: A nexus modeling approach** Al-Riffai, Perrihan, Breisinger, Clemens, Mondal, Md. Hossain Alam, Ringler, Claudia, Wiebelt, Manfred, Zhu, Tingju, 2017-04-28 We use an innovative methodology to model the socioeconomic linkages between water energy and food in the East Nile Basin Based upon a theoretical nexus framework the methodology is expanded into a quantifiable modeling suite that under lies the analysis of each of three country case studies The advantages are that despite resource shortages being a challenge the modeling suite aids in devising policies and strategies that formulate these sectoral interdependencies and provide the evidence based research results necessary for their design in a way that exploits synergies existing across sectors countries and regions Al Zubari n d This paper lays out the methodology and gives an example of an application and scenarios by focusing on three countries in the East Nile Basin This methodology paper will be followed by three individual country case studies that highlight the water energy and food nexus for each

**Glocalized Solutions for Sustainability in Manufacturing** Jürgen Hesselbach, Christoph Herrmann, 2011-03-19 The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 continues a long tradition of scientific meetings focusing on the exchange of industrial and academic knowledge and experiences in life cycle assessment product development sustainable manufacturing and end of life management The theme Glocalized Solutions for Sustainability in Manufacturing addresses the need for engineers to develop solutions which have the potential to address global challenges by providing products services and processes taking into account local capabilities and constraints to achieve an economically socially and environmentally sustainable society in a global perspective Glocalized Solutions for Sustainability in Manufacturing do not only involve products or services that are changed for a local market by simple substitution or the omitting of functions Products and services need to be addressed that ensure a high standard of living everywhere Resources required for manufacturing and use of such products are limited and not evenly distributed in the world Locally available resources local capabilities as well as local constraints have to be drivers for product and process innovations with respect to the entire life cycle The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 serves as a platform for the discussion of the resulting challenges and the collaborative development of new scientific ideas

**Building Performance Simulation for Design and Operation** Jan L.M. Hensen, Roberto Lamberts, 2012-09-10 Effective building performance simulation can reduce the environmental impact of the built environment improve indoor quality and productivity and facilitate future innovation and technological progress in construction It draws on many disciplines including physics mathematics material science biophysics and human behavioural environmental and computational sciences The discipline itself is continuously evolving and maturing and improvements in model robustness and fidelity are constantly being made This has sparked a new agenda focusing on the effectiveness of simulation in building life cycle processes Building Performance Simulation for Design and Operation begins with an introduction to the concepts of

performance indicators and targets followed by a discussion on the role of building simulation in performance based building design and operation This sets the ground for in depth discussion of performance prediction for energy demand indoor environmental quality including thermal visual indoor air quality and moisture phenomena HVAC and renewable system performance urban level modelling building operational optimization and automation Produced in cooperation with the International Building Performance Simulation Association IBPSA and featuring contributions from fourteen internationally recognised experts in this field this book provides a unique and comprehensive overview of building performance simulation for the complete building life cycle from conception to demolition It is primarily intended for advanced students in building services engineering and in architectural environmental or mechanical engineering and will be useful for building and systems designers and operators
