Proceedings of the 10th International Conference on Rotor Dynamics - IFToMM Katia Lucchesi Cavalca, Hans Ingo Weber, 2018-08-20 IFToMM conferences have a history of success due to the various advances achieved in the field of rotor dynamics over the past three decades These meetings have since become a leading global event bringing together specialists from industry and academia to promote the exchange of knowledge ideas and information on the latest developments in the dynamics of rotating machinery The scope of the conference is broad including e g active components and vibration control balancing bearings condition monitoring dynamic analysis and stability wind turbines and generators electromechanical interactions in rotor dynamics and turbochargers The proceedings are divided into four volumes This first volume covers the following main topics Active Components and Vibration Control Balancing Bearings Fluid Film Bearings Magnetic Bearings Rolling Bearings and Seals and Blades Bladed Systems and Impellers **Steam Microturbines in Distributed**

Cogeneration Jan Kiciński, Grzegorz Żywica, 2014-11-05 This book presents the most recent trends and concepts in power engineering especially with regard to prosumer and civic energy generation In so doing it draws widely on his experience gained during the development of steam microturbines for use in small combined heat and power stations based on the organic Rankine cycle CHP ORC Major issues concerning the dynamic properties of mechanical systems in particular rotating systems are discussed and the results obtained when using unconventional bearing systems presented Modeling and analysis of radial flow and axial flow microturbines are addressed in detail covering rotor analysis with different bearing systems simulation modal analysis and stress analysis Furthermore experimental studies of the dynamic properties of microturbine elements are extensively described Interest in distributed generation and CHP ORC is growing rapidly and the potential market for such systems promises to be very large This book will be of value for engineers and scientists involved in the design modeling operation and diagnostics of various types of turbomachinery especially steam microturbines

Computational Modelling of Concrete Structures Gunther Meschke, René de Borst, Herbert Mang, Nenad Bicanic, 2020-11-26 This conference proceedings brings together the work of researchers and practising engineers concerned with computational modelling of complex concrete reinforced concrete and prestressed concrete structures in engineering practice The subjects considered include computational mechanics of concrete and other cementitious materials including masonry Advanced discretisation methods and microstructural aspects within multi field and multi scale settings are discussed as well as modelling formulations and constitutive modelling frameworks and novel experimental programmes The conference also considered the need for reliable high quality analysis and design of concrete structures in regard to safety critical structures with a view to adopting these in codes of practice or recommendations The book is of special interest to researchers in computational mechanics and industry experts in complex nonlinear simulations of concrete structures
