Kuta Solving 2 Step Equations:

High Performance Computing in Power and Energy Systems Siddhartha Kumar Khaitan, Anshul Gupta, 2012-09-07

The twin challenge of meeting global energy demands in the face of growing economies and populations and restricting greenhouse gas emissions is one of the most daunting ones that humanity has ever faced. Smart electrical generation and distribution infrastructure will play a crucial role in meeting these challenges. We would need to develop capabilities to handle large volumes of data generated by the power system components like PMUs, DFRs and other data acquisition devices as well as by the capacity to process these data at high resolution via multi scale and multi period simulations cascading and security analysis interaction between hybrid systems electric transport gas oil coal etc and so on to get meaningful information in real time to ensure a secure reliable and stable power system grid. Advanced research on development and implementation of market ready leading edge high speed enabling technologies and algorithms for solving real time dynamic resource critical problems will be required for dynamic security analysis targeted towards successful implementation of Smart Grid initiatives. This book aims to bring together some of the latest research developments as well as thoughts on the future research directions of the high performance computing applications in electric power systems planning operations security markets and grid integration of alternate sources of energy etc.
