Causal Models and Intelligent Data Management Alex Gammerman, 2012-12-06 Data analysis and inference have traditionally been research areas of statistics. However, the need to electronically store, manipulate, and analyze large scale, high dimensional data sets requires new methods and tools: new types of databases, new efficient algorithms, new data structures, etc. In effect, new computational methods. This monograph presents new intelligent data management methods and tools such as the support vector machine and new results from the field of inference in particular of causal modeling. In 11 well structured chapters, leading experts map out the major tendencies and future directions of intelligent data analysis. The book will become a valuable source of reference for researchers exploring the interdisciplinary area between statistics and computer science, as well as for professionals applying advanced data analysis methods in industry and commerce. Students and lecturers will find the book useful as an introduction to the area.

Oncology Data Manager - Basics to Mastery DEAN STRATTON, An end to end handbook for professionals who steward cancer information. This book translates clinical nuance into reliable analysis ready records. You'll learn how source systems, EHRs, labs, pathology, PACS, trials, PROs feed a governed pipeline; how coding and staging choices shape outcomes; and how to design metrics that matter to clinicians and administrators alike. Along the way, a running scenario follows a new hire asked on day one to reconcile discordant tumor staging from an EHR export and a tumor board spreadsheet, walking through mapping, deduplication, audit trails, and a dashboard that earns clinician trust. The focus is practical: field definitions that survive real clinics, checklists that catch silent errors, and patterns for building repeatable reports that pass audits without drama. Pipeline essentials: intake, normalization, deduplication, identity linkage, longitudinal timelines, reproducible logs. Coding: outlier flags, gold standard reconciliations. Analytics that inform: cohorting, survival curves, time to event endpoints, treatment lines, equity stratifications. Governance: delivery, HIPAA aware designs, role based access, de-identification. SQL, Python, R workflows, automated dashboards.
