Humanizing work and work Environment (HWWE 2016) Dr Lakhwinder Pal Singh, Dr Sarbjit Singh, Prof Arvind Bhardwaj, 2018-02-04 Proceedings of 14th International Conference on Humanizing work and work Environment Metrics

Vincanne Adams, 2016-03-05 This volume's contributors evaluate the accomplishments, limits and consequences of using quantitative metrics in global health. Whether analyzing maternal mortality rates, the relationships between political goals and metrics data, or the links between health outcomes and a program's fiscal support, the contributors question the ability of metrics to solve global health problems. They capture a moment when global health scholars and practitioners must evaluate the potential effectiveness and pitfalls of different metrics even as they remain elusive and problematic. Cerambycidae of the World Qiao Wang, 2017-01-06 Wang has gathered contributions from an impressive cohort of the world's most respected experts on longhorned beetles. Chapters review both basics of cerambycid taxonomy, morphology and behavior, feeding, reproduction and chemical ecology, as well as more applied concerns such as laboratory rearing, pest control and biosecurity. Overall, this volume is a valuable contribution to the literature as a one-stop shop for readers seeking a comprehensive overview of longhorned beetles. It represents a tremendous effort on the part of Wang and the authors and has resulted in a much-needed update to the literature. This volume is the only work of its kind available at this time and is a valuable addition to the library of any scientist studying wood-boring beetles.

Ann M. Ray, Biology, Xavier University, Cincinnati, Ohio, in *The Quarterly Review of Biology*, Volume 94, 2019. There are more than 36,000 described species in the family Cerambycidae in the world. With the significant increase of international trade in the recent decades, many cerambycid species have become major plant pests outside their natural distribution range, causing serious environmental problems at great cost. Cerambycid pests of field, vine and tree crops and of forest and urban trees cost billions of dollars in production losses, damage to landscapes and management expenditures worldwide. *Cerambycidae of the World: Biology and Pest Management* is the first comprehensive text dealing with all aspects of cerambycid beetles in a global context. It presents our current knowledge on the biology, classification, ecology, plant disease transmission and biological, cultural and chemical control tactics, including biosecurity measures from across the world. Written by a team of global experts, this book

provides an entrance to the scientific literature on Cerambycidae for scientists in research institutions primary industries and universities and will serve as an essential reference for agricultural and quarantine professionals in governmental departments throughout the world
