Les connaissances de l'enfant à l'adulte Claude Bastien, 1997 L'évolution des travaux de recherche dans le domaine de la psychologie cognitive a conduit à mettre l'accent sur le caractère contextualisé des connaissances humaines individuelles Leur organisation en mémoire est en effet une organisation fonctionnelle c'est-à-dire qu'elles sont structurées en fonction des buts qu'elles permettent d'atteindre Ceux-ci constituent un contexte qui déclenche l'activation des connaissances et détermine leur validité Ce point de vue est argumenté à partir des conclusions convergentes auxquelles ont abouti des expérimentations menées

dans deux champs différents le premier relève de l'ergonomie cognitive et concerne l'analyse du fonctionnement cognitif d'adultes considérés comme experts dans un domaine de connaissances Le second s'inscrit dans une perspective développementale et aborde l'étude chez l'enfant de la résolution de problèmes et de l'acquisition de connaissances qu'elles soient scolaires l'arithmétique et la lecture notamment ou non On examine en particulier les caractéristiques de la contextualisation les processus d'activation le rôle du point de vue celui du changement de représentation l'élaboration des liens entre connaissances nouvelles et connaissances antérieures Une place particulière est accordée au raisonnement analogique qui apparaît comme une modalité privilégiée d'acquisition des connaissances L'ouvrage s'adresse la fois aux étudiants en psychologie cognitive et tous ceux qui dans la recherche ou les applications sont concernés par les processus cognitifs humains
