Linde Hydraulic Control (LHC)

Digital electro-hydraulic controller

Instead of a control unit, an integrated module has taken the place of the control unit. Instead of a hydraulic controller, a computer electronic controller is used with a very powerful microcontroller system. It controls functions for the drive unit and the working hydraulics (2).

Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive systems. To use different truck parameters and sensors, each truck model has a coding that uniquely identifies the truck.

Troubleshooting

The processor of the electronic control unit analyzes analogue and digital signals. The processor recognizes digital malfunctions and system errors, and displays an error message on the display/monitor on the control interface. In addition, the control unit activates a variety of functions according to the error's highest priority.

- Working light flashes
- Flashing indicator of the internal communication system
- The truck brakes with automatic brake release and off the target mode
- The main battery (in the emergency function) the internal communication system switches off
- An error code appears on display

These functions can be activated by switching off the communication system with the key switch. During a repair, the control unit stores whether the error is still present. If the error is no longer present, the truck returns normal operation. If the error persists, the error code appears on the display and one of the recovery functions is activated.

Changing the controller

4.1.1.1.1.1

Problems regarding component damage due to electrostatic discharge. Component damage is resulting elements will occur if the controller is moved.

The controller is equipped with a "fingerprint" which is attached to the truck's main wiring harness. Communication takes place via CAN bus. The system unit number and the software version of the controller can be read out via the main diagnostic.

If the controller is replaced, the personal spare part controller must be identified and key adapted to the cable harness. All necessary information is available on the code Europe.
