

Lindsey Jones Practice Exam Qs w Explanations Questions with Answers 2024

1. A patient has undergone overnight oximetry. Data shows several episodes of O2 desaturation throughout the night. The RRT would expect orders for which of the following kinds of testing:

- a. V/Q scan
- b. pulmonary function testing
- c. polysomnography
- d. 24-hour Holter monitoring

✓ Your answer: C

Correct answer: C

The use of overnight oximetry is often used to detect O2 desaturation during the night that may be associated with central or obstructive sleep apnea. Because data indicates some periodic desaturation, the practitioner should suspect possible sleep apnea and should order diagnostic testing that will confirm or rule out the suspicion.

A routine screening blood gas performed on an asymptomatic patient prior to surgery shows the following:

pH: 7.38
PaCO2: 42
PaO2: 80
HCO3: 26
SaO2: 96%
COHb: 24%

What should the RRT do?

- a. place the patient on a NRB mask
- b. report the findings and emphasize that the patient is likely a smoker
- c. evaluate saturation using a single wave-length spectrophotometer
- d. run quality control material and evaluate the accuracy of the co-oximeter

✓ your answer: D

correct answer: D

In this case the patient is presented as asymptomatic. A patient with a COHb level of 24% would feel dyspnea and present with tachypnea. Therefore, the RRT should evaluate the accuracy of the lab results, specifically the COHb. When checking accuracy of lab results, one would use quality control measures.
