Signal and Image Processing for Biometrics Amine Nait-Ali, Regis Fournier, 2012-12-17 The aim of this book is to deal with biometrics in terms of signal and image processing methods and algorithms This will help engineers and students working in digital signal and image processing deal with the implementation of such specific algorithms It discusses numerous signal and image processing techniques that are very often used in biometric applications In particular algorithms related to hand feature extraction speech recognition 2D 3D face biometrics video surveillance and other interesting approaches are presented Moreover in some chapters Matlab codes are provided so that readers can easily reproduce some basic simulation results This book is suitable for final year undergraduate students postgraduate students engineers and researchers in the field of computer engineering and applied digital signal and image processing *Introduction to Statistical Machine Learning* Masashi Sugiyama, 2015-10-31 Machine learning allows computers to learn and discern patterns without actually being programmed When Statistical techniques and machine learning are combined together they are a powerful tool for analysing various kinds of data in many computer science engineering areas including image processing speech processing natural language processing robot control as well as in fundamental sciences such as biology medicine astronomy physics and materials *Introduction to Statistical Machine Learning* provides a general introduction to machine learning that covers a wide range of topics concisely and will help you bridge the gap between theory and practice Part I discusses the fundamental concepts of statistics and probability that are used in describing machine learning algorithms Part II and Part III explain the two major approaches of machine learning techniques generative methods and discriminative methods While Part III provides an in depth look at advanced topics that play essential roles in making machine learning algorithms more useful in practice The accompanying MATLAB Octave programs provide you with the necessary practical skills needed to accomplish a wide range of data analysis tasks Provides the necessary background material to understand machine learning such as statistics probability linear algebra and calculus Complete coverage of the generative approach to statistical pattern recognition and the discriminative approach to statistical machine learning Includes MATLAB Octave programs so that readers can test the algorithms numerically and acquire both mathematical and practical skills in a wide range of data analysis tasks Discusses a wide range of applications in machine learning and statistics and provides examples drawn from image processing speech processing natural language processing robot control as well as biology medicine astronomy physics and materials *Brain-Computer Interfaces* Desney S. Tan, Anton Nijholt, 2010-06-10 For generations humans have fantasized about the ability to create devices that can see into a person's mind and thoughts or to communicate and interact with machines through thought alone Such ideas have long captured the imagination of humankind in the form of ancient myths and modern science fiction stories Recent advances in cognitive neuroscience and brain imaging technologies have started to turn these myths into a reality and are providing us with the

ability to interface directly with the human brain This ability is made possible through the use of sensors that monitor physical processes within the brain which correspond with certain forms of thought Brain Computer Interfaces Applying our Minds to Human Computer Interaction broadly surveys research in the Brain Computer Interface domain More specifically each chapter articulates some of the challenges and opportunities for using brain sensing in Human Computer Interaction work as well as applying Human Computer Interaction solutions to brain sensing work For researchers with little or no expertise in neuroscience or brain sensing the book provides background information to equip them to not only appreciate the state of the art but also ideally to engage in novel research For expert Brain Computer Interface researchers the book introduces ideas that can help in the quest to interpret intentional brain control and develop the ultimate input device It challenges researchers to further explore passive brain sensing to evaluate interfaces and feed into adaptive computing systems Most importantly the book will connect multiple communities allowing research to leverage their work and expertise and blaze into the future
