State Observers for Linear Systems with Uncertainty S. K. Korovin, Vasily V. Fomichev, 2009 This book presents the basic concepts and recent developments of linear control problems with perturbations The presentation concerns both continuous and discrete dynamical systems It is self contained and illustrated by numerous examples From the contents Notion of state observers Observability Observers of full phase vectors for fully determined linear systems Functional observers for fully determined linear systems Asymptotic observers for linear systems with uncertainty Observers for bilinear and discrete systems

H-infinity Control and Estimation of State-multiplicative Linear Systems Eli Gershon, Uri Shaked, Isaac Yaesh, 2005-06-24 Multiplicative noise appears in systems where the process or measurement noise levels depend on the system state vector Such systems are relevant for example in radar measurements where larger ranges involve higher noise level This monograph embodies a comprehensive survey of the relevant literature with basic problems being formulated and solved by applying various techniques including game theory linear matrix inequalities and Lyapunov parameter dependent functions Topics covered include convex H_2 and H_∞ norms analysis of systems with multiplicative noise state feedback control and state estimation of systems with multiplicative noise dynamic and static output feedback of stochastic bilinear systems tracking controllers for stochastic bilinear systems utilizing preview information Various examples which demonstrate the applicability of the theory to practical control engineering problems are considered two such examples are taken from the aerospace and guidance control areas

An Invitation to Statistics in Wasserstein Space Victor M. Panaretos, Yoav Zemel, 2020-03-10 This open access book presents the key aspects of statistics in Wasserstein spaces i e statistics in the space of probability measures when endowed with the geometry of optimal transportation Further to reviewing state of the art aspects it also provides an accessible introduction to the fundamentals of this current topic as well as an overview that will serve as an invitation and catalyst for further research Statistics in Wasserstein spaces represents an emerging topic in mathematical statistics situated at the interface between functional data analysis where the data are functions thus lying in infinite dimensional Hilbert space and non Euclidean statistics where the data satisfy nonlinear constraints thus lying on non Euclidean manifolds The Wasserstein space provides the natural mathematical formalism to describe data collections that are best modeled as random measures on Euclidean space e g images and point processes Such random measures carry the infinite dimensional traits of functional data but are intrinsically nonlinear due to positivity and integrability restrictions Indeed their dominating statistical variation arises through random deformations of an underlying template a theme that is pursued in depth in this monograph

Discrete Inverse and State Estimation Problems Carl Wunsch, 2006-06-29 The problems of making inferences about the natural world from noisy observations and imperfect theories occur in almost all scientific disciplines This 2006 book addresses these problems using examples taken from geophysical fluid dynamics It focuses on discrete formulations both static and time varying known variously as inverse state

estimation or data assimilation problems Starting with fundamental algebraic and statistical ideas the book guides the reader through a range of inference tools including the singular value decomposition Gauss Markov and minimum variance estimates Kalman filters and related smoothers and adjoint Lagrange multiplier methods The final chapters discuss a variety of practical applications to geophysical flow problems Discrete Inverse and State Estimation Problems is an ideal introduction to the topic for graduate students and researchers in oceanography meteorology climate dynamics and geophysical fluid dynamics It is also accessible to a wider scientific audience the only prerequisite is an understanding of linear algebra

Problems of control and information theory, 1978 **Advances in Observer Design and Observation for Nonlinear Systems** Omar Naifar, Abdellatif Ben Makhlouf, 2022-02-01 This book discusses various methods for designing different kinds of observers such as the Luenberger observer unknown input observers discontinuous observers sliding mode observers observers for impulsive systems observers for nonlinear Takagi Sugeno fuzzy systems and observers for electrical machines A hydraulic process system and a renewable energy system are provided as examples of applications

Smooth Nonlinear Optimization in \mathbb{R}^n Tamás Rapcsák, 2013-12-01 Experience gained during a ten year long involvement in modelling program ming and application in nonlinear optimization helped me to arrive at the conclusion that in the interest of having successful applications and efficient software production knowing the structure of the problem to be solved is indispensable This is the reason why I have chosen the field in question as the sphere of my research Since in applications mainly from among the nonconvex optimization models the differentiable ones proved to be the most efficient in modelling especially in solving them with computers I started to deal with the structure of smooth optimization problems The book which is a result of more than a decade of research can be equally useful for researchers and students showing interest in the domain since the elementary notions necessary for understanding the book constitute a part of the university curriculum I intended dealing with the key questions of optimization theory which endeavour obviously cannot bear all the marks of completeness What I consider the most crucial point is the uniform differential geometric treatment of various questions which provides the reader with opportunities for learning the structure in the wide range within optimization problems I am grateful to my family for affording me tranquil productive circumstances I express my gratitude to F
