planetary science has undergone a revolution with the discovery of vast oceans of liquid water within the icy moons of our
Solar System These subsurface oceans are concealed beneath thick ice layers We refer to these moons and similar ocean
bearing planetary objects as ocean worlds In this 2nd edition we delve into and compare the latest scientific discoveries on
22 confirmed or potential ocean worlds ranging from the giant asteroid Ceres and the icy moons Europa and Enceladus to
the distant dwarf planets of the outer Solar System such as Pluto Sedna and Eris Along the way we explore the contributions
of multiple spacecraft such as the Pioneers the Voyagers Galileo Cassini Huygens and many others which have provided
much of our current knowledge about these worlds as well as the latest scientific research on this subject This book also
explores the potential for life on each of the confirmed ocean worlds evaluating their habitability Ultimately these might hold
the key to answering fundamental questions about life How did life begin Is there life beyond Earth Where do we come from
With contributions from leading planetary scientists at NASA ESA and other institutions this book aims to be the definitive
