

Pickup belts

When operating in normal crop conditions the pickup belts should operate without slipping. Adjust tension by adjusting lock nuts "A."

CAUTION: Too much tension causes undue wear on pickup belts and component parts. Tighten pickup belts just enough to prevent slippage when belt pickup is operating under normal crop conditions.

It is recommended that pickup belts have approximately 1-1/2-inch free play at center of belt as shown.

Removal

Relieve tension by loosening lock nuts "A." Pull lacing pin "B" out of lacings and remove belts.

Installation

Place belts around rollers so that the lacings come together over lower roller "C." Hold lacings together and insert pin "B." When replacing belts, install right-hand and left-hand belts before installing center belt. Obtain proper belt tension by adjusting lock nuts "A."

Pickup fingers

If the fingers become bent or damaged they should be straightened or replaced immediately. Missing fingers will cause uneven feeding of grain to cylinder.

Replacement

To replace fingers, turn belt pickup drive sheave until the finger that is to be replaced is directly over larger roller "D," then remove lock nut securing finger with clips. Insert new finger and clips and secure with lock nut.

Stripper bar

If the rubber strippers become worn, they can be turned end-for-end on the support bar by using the other series of holes provided in strippers.

If the complete top area of the rubber strippers become worn, the strippers can be turned bottom side up, also end-for-end to provide two more wearing areas.
