Sat Attack Maths Anne Frobisher, Len, 2004-12 SAT Attack Maths is the perfect 10 week revision programme for both independent and whole class maths teaching *Proof Technology in Mathematics Research and Teaching* Gila Hanna, David A. Reid, Michael de Villiers, 2019-10-02 This book presents chapters exploring the most recent developments in the role of technology in proving The full range of topics related to this theme are explored including computer proving digital collaboration among mathematicians mathematics teaching in schools and universities and the use of the internet as a site of proof learning Proving is sometimes thought to be the aspect of mathematical activity most resistant to the influence of technological change While computational methods are well known to have a huge importance in applied mathematics there is a perception that mathematicians seeking to derive new mathematical results are unaffected by the digital era The reality is quite different Digital technologies have transformed how mathematicians work together how proof is taught in schools and universities and even the nature of proof itself Checking billions of cases in extremely large but finite sets impossible a few decades ago has now become a standard method of proof Distributed proving by teams of mathematicians working independently on sections of a problem has become very much easier as digital communication facilitates the sharing and comparison of results Proof assistants and dynamic proof environments have influenced the verification or refutation of conjectures and ultimately how and why proof is taught in schools And techniques from computer science for checking the validity of programs are being used to verify mathematical proofs Chapters in this book include not only research reports and case studies but also theoretical essays reviews of the state of the art in selected areas and historical studies The authors are experts in the field

This book argues for changed attitudes towards low attaining students in secondary mathematics. Certain social groups regularly underachieve in mathematics so attainment is seen as an issue of social justice. The way that assessment, testing, teaching and grouping decisions in mathematics can confirm a cycle of low attainment is carefully described with well founded arguments based on many years experience and research. Anne Watson offers an alternative view of attainment and capability based on real classroom incidents in which low attaining students show themselves to be able to think about mathematics in quite sophisticated ways. She argues that teaching could be based on learners proficiency rather than seen as correcting or confirming deficits in knowledge and behaviour. She describes how a group of teachers who believed that their students could do better with higher expectations developed a range of principles and strategies which supported their work. The students showed significant progress and the teachers felt they were doing a better job. This book is for anyone who is in a position to challenge existing practice in mathematics teaching either in their own classroom or in the broader cultures of teaching. It offers the arguments, the knowledge and the support for changing practice in a non judgemental, practical but well founded way.
