La Thermographie Du Bâtiment:

La thermographie du bâtiment Dominique Pajani, 2012-04-27 Le réchauffement climatique et la fin inévitables des énergies fossiles ont fait de la performance énergétique du bâtiment un enjeu majeur La consommation de chauffage inutilement élevée constitue un gisement d'économies et parallèlement l'amélioration de la qualité de la construction dans le respect de normes est un défi que les maîtres du bâtiment se sont engagés à relever Deux outils se distinguent qui contribuent à la performance et assurent son expertise l'infiltrométrie et la thermographie Cette dernière n'était pas encore formalisée c'est l'objet de cet ouvrage La matière met un rayonnement parfois visible corps chauffés au rouge flamme mais le plus souvent invisible Comme il est de la température de la matière on l'appelle rayonnement thermique Au moyen de la caméra thermique la thermographie cartographie les rayonnements c'est l'image thermique et elle les mesure c'est le thermogramme La maîtrise de la thermographie conduit la cartographie des déperditions radiatives et la caractérisation quantitative des défauts de l'enveloppe L'ouvrage contient les principes les applications et surtout les outils d'interprétation des thermogrammes L'auteur y explique dans le détail l'approche que doit impérativement maîtriser le thermographe sous peine d'interprétation erronée un risque omniprésent en thermographie du bâtiment

Guide pratique de thermographie du bâtiment Dominique Pajani, Jean-Pierre Favre, Jean-Luc Marty, Christine Guillermo, 2012-10-26 Devenue une priorité la performance énergétique du bâtiment est un objectif qui ne peut être atteint qu'avec de nouveaux outils dont on sait aujourd'hui que l'un des plus efficaces est la thermographie Mais au juste qu'appelle-t-on thermographie du bâtiment La matière met un rayonnement parfois visible mais le plus souvent invisible De la température il est appelé rayonnement thermique Avec la caméra thermique le thermographe cartographie et mesure les rayonnements il obtient une image thermique et un thermogramme dont il déduira les déperditions radiatives lesquelles mettent en évidence les défauts de l'enveloppe Consacrer l'apprentissage qui exige une bonne interprétation des images indispensable l'exactitude du diagnostic ce petit livre contient le nécessaire du thermographe Abondamment illustré de photos et de schémas en couleurs les auteurs y délivrent les bases de ce qu'il faut savoir

La thermographie infrarouge Gilbert Gaussorgues, 1999 Au fil des années La thermographie infrarouge s'est imposée comme l'ouvrage de référence consacré aux méthodes et aux moyens d'accéder à l'information contenue dans la matière par saisie de son rayonnement infrarouge Ce livre s'adresse un large public concerné par les technologies optiques ingénieurs professeurs étudiants Gilbert Gaussorgues détaille clairement tous les maillons de la chaîne infrarouge Il donne pour chaque élément la plupart des configurations possibles et précise leurs propriétés et leurs performances Comme dans les précédentes éditions des exemples d'utilisations militaires et civiles de ces méthodes apportent un éclairage pratique De nombreux schémas et graphiques viennent illustrer le propos de l'auteur Cette 4^e édition paraissant 10 ans après la 3^e a été entièrement revue De plus elle inclut un chapitre consacré toutes les nouveautés concernant le fonctionnement et l'utilisation des caméras détecteurs matriciels refroidis et non refroidis Enfin 12 pages hors texte en couleurs complètent cet état de l'art exhaustif et précis

thermographie du bâtiment, 2012 La thermographie infrarouge Gilbert Gaussorgues, 1984 Thermographie instrumentale et industrielle Institut universitaire de technologie (Reims, Marne : Châlons-en-Champagne : Charleville-Mézières), Société française de physique. Section (Champagne-Ardenne), 2011 Mesure d'émissivité pour la thermographie infrarouge appliquée au diagnostic quantitatif des structures Jean-Pierre Monchau, 2013

La thermographie infrarouge constitue un outil de diagnostic très utile dans le domaine du bâtiment et du génie civil. Cependant, un diagnostic quantitatif reste difficile et l'émissivité des surfaces joue un rôle important. Le présent travail est une étude sur la mesure d'émissivité pour le diagnostic quantitatif des structures par thermographie. Un des enjeux est de compléter une base de données d'émissivité pour des matériaux du bâtiment et du génie civil. Pour cela, il a été nécessaire de développer des appareils de mesure portables. Deux appareils ont été développés au CERTES utilisant des méthodes indirectes. Ces méthodes consistent à mesurer la réflexion d'un flux infrarouge modulé et nécessitent une réflectance connue. Le premier appareil module le flux par modulation lente de température, mesure en 16 mn, il est adapté aux surfaces diffusantes et hétérogènes comme les bitumes bitumineux et les matériaux de construction du bâtiment. L'autre appareil utilise un système de cran permettant une modulation plus rapide, mesure en quelques secondes. Il est plus polyvalent, il est aussi plus facilement transportable et permet facilement d'obtenir une évaluation du caractère plus ou moins spéculaire de la surface. Ces deux appareils couvrent au choix une bande spectrale large 1-40 µm pour valuer les propriétés radiatives des surfaces et une bande étroite 8-14 µm adaptée à la sensibilité des caméras infrarouges. Une étude comparative sur les mesures d'émissivité a été entreprise avec le LNE, Laboratoire National de Métrologie et d'Essais. Les chantillons utilisés pour cette étude comparative ont permis de tester les différents dispositifs pour des matériaux ayant des propriétés radiatives très variées. Des mesures ont été effectuées au laboratoire et sur site sur une large gamme de matériaux usuels du bâtiment et du génie civil.
