

The Same Job, and why, for each of the Simulation LabIntroduction:

When an object is dragged across a horizontal surface, the force of friction that must be overcome depends on the normal force as $F_f = \mu F_n$, and the normal force is given by

$$F_n = F_g$$

When the surface becomes an inclined plane, the normal force changes and when the normal force changes, so does the friction. In this lab, you will change the angle of an inclined plane and observe how weight is resolved into its components (F_g and F_{gx}) using the built-in trig functions.

The Ramp

Procedures: Start with the Sim -> Physics -> Motion -> The Ramp. **Click here**

- The goal is only in the **Simulation** part of the simulation. Above features will be used later when we investigate a change. Start by playing with the cabinet some. Move, push, really... Now...back to work.
- Move the cabinet up and down the ramp by dragging it with your mouse.
- Move the ramp to an angle of zero (horizontal) and draw a free body diagram of the cabinet here:

1. On a horizontal plane, the normal force is equal to the weight.
2. If the cabinet has a mass of 100kg, it therefore has a normal force of 1000 N and a friction force (on the horizontal plane) of 200N ($\mu = 0.20$).

- **Reset** the ramp and draw a free body diagram of the cabinet on the side here:

3. The force down the plane and normal force are components of weight, F_g .
4. Before we add an applied force on the ramp, there is a force of friction, of 200 that acts against the force down the plane, force parallel.
5. When we apply a force to get the cabinet moving, the friction force acts in the opposite direction as movement of the cabinet.

6. **Slide** increase angle (3.1 degrees at a time) of the ramp until the cabinet starts to move on its own. What angle is this? 12° = 0

7. At this point, the force down the plane is equal then more than the force of friction.

8. Since the ramp is now at an angle, the normal force is less than the weight.

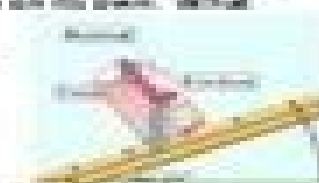

9. At the angle above, the normal force equals 500 N. (hint: what trig function?)

10. At the angle above, the force down the plane equals 200 N. (hint: what trig function?)

11. Using the formula for friction above, the force of friction is 200 N.

12. If the plane-cabinet were frictionless, what angle would be required for the cabinet to move? Any

13. What without friction, any force in the direction of the plane would create an acceleration.

$$\mu = 0.20 \text{ only!}$$

Calculate first, then test each object in the table below with the simulation on a **horizontal** plane.

Object	Mass	Weight	Normal Force	μ	Coef of friction	Friction Force (or Opposite)
Box	50 kg	187 N	187 N	0.20	0.20	37.4
Crate	100 kg	374 N	374 N	0.20	0.20	74.8
Plane	200 kg	748 N	748 N	0.20	0.20	149.6
Refrigerator	300 kg	1122 N	1122 N	0.20	0.20	224.4
