Whether analyzing maternal mortality rates, the relationships between political goals and metrics data, or the links between health outcomes and a program's fiscal support, the contributors question the ability of metrics to solve global health problems. They capture a moment when global health scholars and practitioners must evaluate the potential effectiveness and pitfalls of different metrics even as they remain elusive and problematic. Ray, Biology, Xavier University, Cincinnati, Ohio, in *The Quarterly Review of Biology*, Volume 94, 2019. There are more than 36,000 described species in the family Cerambycidae in the world. With the significant increase of international trade in the recent decades, many cerambycid species have become major plant pests outside their natural distribution range, causing serious environmental problems at great cost. Cerambycid pests of field, vine and tree crops and of forest and urban trees cost billions of dollars in production losses, damage to landscapes and management expenditures worldwide. *Cerambycidae of the World: Biology and Pest Management* is the first comprehensive text dealing with all aspects of cerambycid beetles in a global context. It presents our current knowledge on the biology, classification, ecology, plant disease transmission and biological, cultural and chemical control tactics, including biosecurity measures from across the world.
