Naranjo, G. Maury, 1990 La migration des oiseaux est ici étudiée à travers quatre réserves naturelles les parcs du Djoudj au Sénégal d'Ichkeul en Tunisie de Keolad o en Inde et des Everglades aux États-Unis Le pourquoi de la migration les routes migratoires l'instinct de migration et l'orientation sont les principaux thèmes abordés **Evolution de la migration à longue distance chez les oiseaux** Paul Dufour, 2021 Si de nombreux animaux effectuent des migrations saisonnières la migration des oiseaux demeure l'une des plus

spectaculaires du règne animal et c'est d'abord parce qu'elle fascine les humains que cette migration est la plus étudiée depuis toujours. Mais malgré cet engouement précoce de la communauté scientifique d'importantes interrogations persistent. Parmi celles-ci les scénarios biogéographiques qui expliquent la distribution des espèces migratrices ou qui ont conduit des espèces ou des lignées entières à évoluer vers un comportement de migration saisonnière longue distance restent peu compris. L'objectif de ma thèse était d'aborder ces questions à différents niveaux taxonomiques afin d'étudier les implications écologiques et évolutives de la migration longue distance chez les oiseaux. Plus précisément 1 je me suis d'abord intéressé aux scénarios d'évolution biogéographique et des niches climatiques qui ont conduit l'émergence de stratégies de migration géographique saisonnière longue distance 2 Resserrant le cadre taxonomique aux Charadriiformes j'ai approfondi mes recherches sur la biogéographie de la migration en abordant la question du rôle de la migration dans les processus de diversification et la mise en place des gradients globaux de biodiversité. Pour mieux comprendre ces mécanismes évolutifs j'ai également étudié 3 comment l'évolution de la coloration est liée à l'évolution de stratégies de migration chez les Laridae et 4 l'influence de ces mouvements longues distances sur les autres événements du cycle annuel chez une espèce d'oiseau marin de l'Arctique 5 Enfin l'échelle intraspécifique je me suis penchée sur la mise en place de nouvelles voies de migration chez deux espèces de passereaux d'origine sibérienne pour explorer la question des rapides changements de distribution. Dans l'ensemble les résultats de ces études montrent que les différentes facettes de l'écologie et l'évolution sont fortement intriquées pour comprendre l'évolution du comportement de migration longue distance. Ils montrent également l'importance de confronter plusieurs échelles taxonomiques et plusieurs facteurs notamment temporels pour appréhender l'histoire évolutive de ce comportement. Enfin ils soulignent la difficulté de prévoir les changements de distribution des oiseaux migrants dans un contexte de changements globaux.
