

### 3 radial artery and radial nerve

Look at the radial artery and the sensory branch of the radial nerve, the first encroaching deep, the second superficial to the first compartment. Scanning from proximal to distal, note the radial nerve and its branches snapping from ventral to dorsal over these tendons.

Legend: A, radial artery; APL, abductor pollicis longus tendon; arrow, radial nerve; asterisks, tendinous slips of the abductor pollicis longus; EPB, extensor pollicis brevis tendon; v, cephalic vein

### 4 second compartment

With the palm facing the examination table, shift the probe medially on transverse planes to depict the second compartment - extensor carpi radialis longus and extensor carpi radialis brevis tendons. Sweep the probe cranially over these tendons up to demonstrate the abductor pollicis longus and extensor pollicis brevis muscles that encroach superficial to them at the distal forearm (intersection) to reach the first compartment.

Legend: ECRL, extensor carpi radialis longus tendon; ECRB, extensor carpi radialis brevis tendon; arrows, bulk of the abductor pollicis longus and extensor pollicis brevis muscles crossing superficial to the tendons of the II compartment; I, first compartment; II, second compartment.

*The Practice of Radiology Education* Teresa van Deven, Kathryn M.

Hibbert, Rethy K. Chhem, 2009-10-13 The practice of radiology education challenges and trends will provide truly helpful guidance for those of you involved in teaching and training in radiology The goal of this book is ultimately to improve patient care As a companion piece to the first book radiology education the scholarship of teaching and learning this book focuses on applying the concepts at a practical level that can be applied flexibly within educational programs for radiology residents and fellows in any medical imaging learning environment This book focuses on the application of scholarship in terms of the dissemination of useful testable and reproducible information to others It links educational theory with practice and for those of you who wish to explore educational practice further a number of chapters suggest additional readings and resources The publication is timely and congruent with one of the most important twenty first century trends in medical education the move from amateurism to professionalism in teaching In the past medical schools and other health professions training institutions have been criticized for their resistance to the adoption of the science of medical education Very few of us learned how to teach as medical students and most of us have our teaching responsibilities thrust on us with little preparation The award of a basic medical degree was assumed to carry with it basic teaching expertise unfortunately an unwarranted assumption in some cases

**Tendons** Hasan Sözen, 2019-12-04 Mankind has reached its present physical form through evolution of the movement system Muscles bones and joints are the most important components of the movement system Muscles are active elements while bones and joints are passive elements But to bring about movement these three elements must work together Tendons are round oval or flat tissues that connect muscles to bones Muscle tendon or ligament injuries prevent motion so this is an important issue in trauma If muscle tendon or ligament injuries occur together with vessel or nerve injury it may be life threatening The cause of injury might differ from a simple sports injury to a serious traffic accident Muscles bones and joints have taken their place in the literature but it would be wrong to say the same for tendons This book describes tendons from different perspectives thus providing the missing information in the literature I hope that this book will be useful for anyone who wants to read about new perspectives on tendons I also hope that it will inspire researchers working in this field
