

Snell's Law

A relationship relating the index of refraction in a given a medium and incident light angle to the index of refraction in the new medium and the refracted light angle.

$$n_1 \sin \theta_1 = n_2 \sin \theta_2$$

n_1 : index of refraction of medium 1
 n_2 : index of refraction of medium 2

θ_1 : the angle of light in medium 1
 θ_2 : the angle of light in medium 2

Light bends towards the normal when going from a medium with a smaller index of refraction to a larger index of refraction. (Light will have the smaller angle in the medium with the greater index of refraction.)
