

## Technical Memorandum (TM)

**TO:** MEEN 489 Students  
**FROM:** Class instructor  
**Subject:** Writing Technical Memos  
**Date:** February 1, 2011

### SUMMARY OF THIS MEMO

This memorandum explains (and demonstrates) how to write a technical memorandum (TM). Webster's defines a memorandum as a "*usually brief communication written for interoffice circulation . . . a communication that contains directive, advisory, or informative matter*". Adding the adjective "*technical*" implies a certain degree of structure both in format and content. A TM is a concise and well written communication approximately three to six pages long<sup>1</sup> that:

- defines a task,
- specifies the objectives of the task,
- identifies and outlines a solution method and/or an experimental procedure,
- reports and discusses the results of implementing the solution and/or the recorded performance from field or laboratory measurements, and
- provides conclusions and recommendations.

It is often necessary to include appendices containing data, sample calculations, etc. to support statements made in the main body of the Memo. A description of the various parts of a TM follows.

### HEADING

The heading should follow the format of this memo. The tech memo must be dated. (All correspondence, analysis, etc. should be dated.) The heading of a memo contains parts for "TO", "FROM", and "SUBJECT". The TO part identifies the recipient of the memo by name and title, i.e., a manager or a superior or a customer. The FROM part identifies you by name and position; e.g., Joe Studious, Shop Manager. The SUBJECT part is equivalent to a title and tells what the memo is about as completely and concisely as possible.

### EXECUTIVE SUMMARY

Concisely define the task in terms of the objectives of the work and specify any restrictions or constraints. Summarize the major findings, conclusions and difficulties found. Sound engineering practice demands a precise usage of technical terms and short sentence structure. This is not an introduction; do not give a lot of background and motivation. The recipient of the TM(may be) is knowledgeable about your work and you do not need to explain to him/her why you are doing it. You must explain exactly what you are going to do, but you do not need to give the motivation for the project. (The total length of this section should not exceed 200 words).

### METHOD

Describe the method used to solve the problem (theoretical, experimental, or both) including any major assumptions, derivation of important equations, and/or experimental procedures. Describe the physics of the problem, show assumptions for the physical model and the governing equations of motion, including boundary and initial conditions. Provide a concise nomenclature to follow.

This section almost always requires some sketches or drawings, i.e. figures. The main text should always refer to the figures before they appear. The writer needs to explain the items depicted with attention to trends

<sup>1</sup> Type font should be maximum 12 points, 1 or 1 1/2 spaces and with 1 inch margins in 8 1/2 by 11 inch pages.

## **Memorandum For Electro Technology July 2014:**

*Mobile Broadband Communications for Public Safety* Ramon Ferrús, Oriol Sallent, 2015-10-12 This book provides a timely and comprehensive overview of the introduction of LTE technology for PPDR communications. It describes the operational scenarios and emerging multimedia and data centric applications in demand and discusses the main techno economic drivers that are believed to be pivotal for an efficient and cost effective delivery of mobile broadband PPDR communications. The capabilities and features of the LTE standard for improved support of mission critical communications e.g. proximity services, group communications are covered in detail. Also different network implementation options to deliver mobile broadband PPDR communications services over dedicated or commercial LTE based networks are discussed including the applicability of the Mobile Virtual Network Operator (MVNO) model and other hybrid models. Radio spectrum matters are also discussed in depth, outlining spectrum needs and providing an outlook into allocated and candidate spectrum bands for PPDR communications and suitable dynamic spectrum sharing solutions in PPDR communications. Explanations are accompanied by a vast collection of references that allow the more intrigued reader to gain further insight into the addressed topics.

### **Transmission, Distribution, and Renewable Energy Generation Power Equipment** Bella H.

Chudnovsky, 2017-03-07 The revised edition presents, extends and updates a thorough analysis of the factors that cause and accelerate the aging of conductive and insulating materials of which transmission and distribution electrical apparatus is made. New sections in the second edition summarize the issues of the aging, reliability and safety of electrical apparatus as well as supporting equipment in the field of generating renewable energy: solar, wind, tide and wave power. When exposed to atmospheric corrosive gases and fluids, contaminants, high and low temperatures, vibrations and other internal and external impacts, these systems deteriorate; eventually the ability of the apparatus to function properly is destroyed. In the modern world of green energy, the equipment providing clean electrical energy needs to be properly maintained in order to prevent premature failure. The book's purpose is to help find the proper ways to slow down the aging of electrical apparatus, improve its performance and extend the life of power generation, transmission and distribution equipment. **International**

**Standardization and the Agreement on Technical Barriers to Trade** Andrea Barrios Villarreal, 2018-10-04 International Standardization and the Agreement on Technical Barriers to Trade examines the international standardization system generally, with a specific focus on some of the bodies within this system along with their rules and procedures. It also examines and questions the lack of definition regarding several features related to the system, notably an international standardizing body (ISB) and international standards in the Agreement on Technical Barriers to Trade (TBT). Andrea Barrios Villarreal, who has been involved in standardization activities for more than seven years, provides a unique and in-depth analysis that will be useful to scholars, students and practitioners. This illuminating work is a welcome addition to the international economic law literature and should be read by anyone with an interest in the interaction between trade law and
