

Math pupils to take part in PAMA Competition

With mathematics skills once again in the spotlight and the education crisis in this area set to continue, five South African pupils will for the first time participate in the international Pan Pacific Abacus and Mental Arithmetic (PAMA) Association (PAMA) competition to be held in India this year.

The pupils have been drawn from the top five winners in the second National Soroban Education Mental Arithmetic System (SEMAS) competition held in Johannesburg on 13 September. Two pupils from Krugersdorp, Ilke Lemmer and Wilhelm Erasmus will be taking part.

More than 320 entrants from across South Africa took part in the local competition this year, which was hosted by SEMAS.

The three selected pupils attending the international competition will demonstrate their arithmetical ability, learnt through the SEMAS system, against learners from all over the world. The pupils must solve certain problems with and without an abacus in a certain time limit.

SEMAS is an educational system based on the study of the Abacus technique of Japanese origin and designed to improve mathematical literacy and understanding among four to 12-year-old learners.

"The abacus is the oldest surviving 'computer' and is more than 2 000 years old.

"As an educational technique, mental arithmetic and the use of the abacus helps children to develop their mathematical skills without reliance on technology in a fun, non-threatening way," says director of SEMAS SA, Marlene Ras.

The system has been shown to improve IQ by up to 25 points and create greater mental and memory capacity.

Significantly, it also fosters in children a love of maths. Pupils from Japan, Hong Kong, Korea, Chinese, Taipei and Singa-

pore, all of which use abacus education, performed the best in maths tests out of 150 countries.

International studies have shown that the training not only improves a child's calculating ability and his/ her understanding of arithmetic, but also increases

memory power and creativity, concentration level and listening skills, as well as the ability to analyse problems.

"Moms in particular can benefit from becoming a franchisee and taking part in the training in the system."

Maths Articles In Newspaper:

All the Math That's Fit to Print Keith Devlin, 1994 This volume collects many of the columns Keith Devlin wrote for The Guardian

Exploring Education Policy Through Newspapers and Social Media Aspa Baroutsis, Bob Lingard, 2023-06-07 Exploring Education Policy Through Newspapers and Social Media offers an original theorised and empirically based account of contemporary representations, articulations and imaginings of education policy through news and new media. In its thorough exploration of the uses and effects of newspapers and Twitter in education policy, the book provides a detailed research-based account of media influences and opens up multiple future research agendas in media sociology and policy sociology in education. The authors place an important analytical focus on mediatisation and social mediatisation or deep mediatisation and how both have effects and affects in education policy and politics. Their analyses situate these sociologically within changing societies, changing media and changing education policy. The book also explores the effects of datafication and digitalisation of the social in all forms of media and their manifestations in morphing imbrications between the global, the national and the local in education policies. This book will be of great interest to researchers, scholars and higher degree research students in the domains of media sociology and policy sociology of education. It also will be of interest to policymakers and politicians in education, teacher unions and education activists, journalists and those concerned about the impacts of the decline in legacy media and the surveillance and commercialisation possibilities of new media.

Breaking Images Brian Greer, David Kollosche, Ole Skovsmose, 2024-12-11 Mathematics is an activity, something we do, not just something inert that we study. This rich collection begins from that premise to explore the various social influences, institutional forces and lived realities that shape and mould the study and practice of mathematics and are moulded by it in turn. These twenty-one essays explore questions of mathematics as a topic of philosophy but also the nature and purpose of mathematics education and the role of mathematics in moulding citizens. It challenges the biases and prejudices inherent within uninformed histories of mathematics, including problems of white supremacy, the denial of cultural difference and the global homogenization of teaching methods. In particular, the book contrasts the effectiveness of mathematics and science in modelling physical phenomena and solving technical problems with its ineffectiveness in modelling social phenomena and solving human problems and urges us to consider how mathematics might better meet the urgent crises of our age. The book addresses anybody who is interested in reflecting on the role of mathematics in society from different perspectives. It allows mathematicians to ponder about the cultural connections of mathematics and provides new perspectives for philosophical, sociological and cultural studies of mathematics. Because of the book's emphasis on education in mathematics, it is especially interesting for mathematics teachers and teacher educators to challenge their understanding of the subject.
