

Membrane Function

How does the cell membrane control movement of materials?

Why?

The membrane is critical to the maintenance of homeostasis in living organisms. The cell membrane separates the cell from the external environment and plays a critical role in regulating movement of material in and out of the cell. Additionally, eukaryotic cells are made complex by the presence of internal membranes that form organelles, so the cells may become specialized. These organelle membranes create compartments within the cell that can do specific functions.

Model 1 – Types of Ions and Molecules in a Cell

| Type 1 Ions | Type 2 Molecules | Type 3 Molecules | Type 4 Molecules |
|--------------------|--|--|---|
| Potassium: K^+ | Glucose:  | Water:  Urea:  | Molecular oxygen (O_2):  Carbon dioxide (CO_2):  |
| Sodium: Na^+ | | | |
| Calcium: Ca^{2+} | | | |
| Chloride: Cl^- | | | |
| Polar | polar | Polar | nonpolar |
| small | large | Small | Small |

- Consider the ions and molecules in Model 1.
 - Identify at least two substances that would need to move into a cell to maintain homeostasis.
Cells need water and oxygen to maintain homeostasis.
 - Briefly explain why the cell needs each of the substances you identified in part a.
Oxygen is needed to help create ATP for energy for cells, where as water is used to break things down and cause reactions like protein synthesis within cells.
- Consider the ions and molecules in Model 1.
 - Identify at least two substances that would need to move out of a cell to maintain homeostasis.
Glucose and Carbon Dioxide (CO_2).
 - Briefly explain the source of the molecules you identified in part a.
Glucose is needed around the cells to help stimulate energy, and carbon dioxide is used to help breakdown oxygen for plant cells to use.
- Complete the table by labeling the types of substances as polar or nonpolar and large or small.

Membrane Function Pogil Activities For Ap Biology:

Biological Membranes Roger Harrison, 2013-11-22 to the Second Edition RESEARCH INTO MEMBRANE ASSOCIATED PHENOMENA HAS EXPANDED VERY greatly in the five years that have elapsed since the first edition of *Biological Membranes* was published. It is to take account of rapid advances in the field that we have written the present edition. There is now general acceptance of the fluid mosaic model of membrane structure and of the chemiosmotic interpretation of energetic processes and our attention has shifted from justifying these ideas to explaining membrane functions in their terms. Much more information has become available concerning the role of the plasma membrane in the cell's recognition of and response to external signals and this is reflected in the increased coverage of these topics in the book. The general form of the book remains the same. As before, a list of suggested reading, subdivided by chapter, is provided and this has been expanded to include a greater proportion of original papers. The book is still primarily designed as an advanced undergraduate text and also to serve as an introduction for postgraduate workers entering the field of membrane research. We have taken cognizance of the comments of many reviewers, colleagues, and students on the first edition and thank them for their contributions. In particular, we wish to acknowledge our colleagues R. Eisinger, G. D. Holman, D. W. Hough, and A. H. Rose. Dr. C. R. Structure and Function of Biological Membranes Lawrence I. Rothfield, 2014-06-28 *Structure and Function of Biological Membranes* explains the membrane phenomena at the molecular level through the use of biochemical and biophysical approaches. The book is an in-depth study of the structure and function of membranes. It is divided into three main parts. The first part provides an overview of the study of the biological membrane at the molecular level. Part II focuses on the detailed description of the overall molecular organization of membranes. The third part covers the relationship of the molecular organization of membranes to specific membrane functions, discusses catalytic membrane proteins, presents the role of membranes in important cellular functions, and looks at the membrane systems in eukaryotic cells. Biochemists, cell physiologists, biologists, researchers, and graduate and postdoctoral students in the field of biology will find the text a good reference material. **The Molecular Basis of Membrane Function** Society of General Physiologists, 1969 The Structural Basis of Membrane Function Youssef Hatafi, 2012-12-02 *The Structural Basis of Membrane Function* is a documentation of an international symposium of the same title. This book serves as a collection of the significant articles pertaining to the field of membrane research. It is composed of seven parts where the first and last parts are articles contributed by scientific authorities. The book generally discusses the membrane research and this study's relevance to the society. Then the book specifically looks into membrane features including its structure, processes, its functions, and types. Some of the specific topics included in the discussion of each part are phospholipases and monolayers used in studies of membrane structure, molecular aspects of active transport and electron transfer in energy transducing membranes. The book also explains the two functions in common of biological membranes: synaptic receptor proteins and liver microsomal
