- If you are unsure about any part of these instructions, consult an electrician.

CAUTION

- For indoor applications only.

SAVE THESE INSTRUCTIONS.**INSTALLATION INSTRUCTIONS****ENGLISH****Product Description**

Leviton Cat. No. ODS15-ID, Wall Switch Occupancy Sensor, uses Passive Infrared (PIR) detection technology to monitor a room for occupancy through a segmented lens. This specialized lens divides the field of view into sensor zones. When a person passes into or out of a sensor zone, the sensor detects motion and switches the lights ON. The lights will remain ON as long as there is an occupant moving through the sensor zones. ODS15-ID can also be programmed to vacancy mode (Manual ON/Auto OFF) for installations where manual ON switching is required for Title 24 applications. The ODS15-ID provides a 180° field of view with a maximum coverage area of approximately 1100 square feet. The maximum sensing distance in front of the sensor is 30-40 feet, and 15-20 feet on either side. A "minor motion" zone detects small body movements and allows the lights to stay ON even though a person may not be moving or walking around the room. The remainder of the field of view, the "major motion" zone, exhibits a lesser degree of sensitivity and requires larger movements. Simple configuration can also be applied using push-button setup for several preconfigured options. ODS15-ID is also equipped with a photocell for daylighting which is programmable using the Leviton Smart Sensor App.

Before Installation

- Installs into standard single gang wall boxes.
- Supports multi-gang installations.
- Ivory, light almond, black, red, and gray faceplates are available with a color change kit (sold separately).
- Decora® wallplate not included.
- Controls lighting loads and plug load control up to 15A.

FOR OPTIMAL PERFORMANCE:

The ODS15-ID sensor lens establishes dozens of zones of detection. The sensor is sensitive to the heat emitted by the human body. In order to trigger the sensor, the source of heat must move from one zone of detection to another. The device is most effective in sensing motion across its field of view, and less effective sensing motion towards or away from its field of view. Keep this in mind when selecting the installation location. Note that occupancy sensors respond to rapid changes in temperature, so care should be taken NOT to mount the device near a climate control source (i.e., radiators, air exchanges, and air conditioners). Hot or cold drafts will look like body motion to the device and will trigger it if the unit is mounted too close. It is recommended to mount the occupancy sensor at least 6 ft away from a climate control source. In addition, it is also recommended NOT to mount the occupancy sensor directly under a large light source. Large wattage bulbs (greater than 100W incandescent) give off a lot of heat and switching the bulb causes a temperature change that can be detected by the device. Mount the occupancy sensor at least 6 ft away from large bulbs. If it necessary to mount the device closer, lower the wattage of the bulb directly overhead.

WARNING: TO AVOID FIRE, SHOCK, OR DEATH: TURN OFF POWER at circuit breaker or fuse and test that power is off before wiring!

1. Strip wires 3/4 in and connect as per wiring diagram. Ensure wires are firmly attached and there is no exposed copper.

2. Gently place the wires and your device into the wall box and attach with screws provided.
3. If desired, change switch color. (Sold separately.)
4. Restore power and test ON/OFF operation. Locator light should be ON when switch is in the OFF state.
5. Install Decora wallplate (not included).
6. ODS15-ID is designed to work and be fully functional right out of the box, settings can be adjusted using the Leviton Smart Sensor App or simple push button programming.

7. Using the Leviton Smart Sensor App or push button programming, you can now configure the sensor to your preferred settings. (Leviton Smart Sensor App, downloadable from Google Play™ or the Apple App Store®, using any Bluetooth™ enabled Android™ or iOS Device). Operating mode, sensor sensitivity, and sensor timeout can be quickly adjusted. For more advanced settings such as daylighting and nightlight configuration, the Leviton Smart Sensor App will need to be used for setup and adjustments.

**Operation**

PUSH-BUTTON: ODS15-ID has a push button switch that will toggle the lights ON or OFF. When mode is set to Auto ON / Auto OFF, the lights will automatically turn ON when occupancy is detected and will turn OFF automatically after occupancy is no longer detected and the timeout has expired. If mode is set to Manual ON / Auto OFF, the lights will only turn ON when the push button switch is pressed; the lights will turn OFF automatically after occupancy is no longer detected and the timeout has expired. If the lights are ON, the lights can be turned OFF when the button is pressed. The lights will stay OFF (regardless of motion detected) until the timeout expires. After the timeout expires, the lights will turn ON when the next motion is detected. This is useful for slide or film presentations.

NOTES:

- The Motion Indicator light will blink RED for 1 second each time motion is detected.
- In Manual ON mode, the button must be pressed to turn the lights ON. In the absence of motion, the unit will time out and turn the lights OFF.

Configuration and Programming

1. The ODS15-ID Sensor is designed to work out of the box in default settings. Changes to these settings and additional product configuration can be performed using the Leviton Smart Sensor App, downloadable from Google Play™ or the Apple App Store®, using any Bluetooth™ enabled Android™ or iOS Device.
 - a. To pair to device using the Leviton Smart Sensor App:
 - i. Press and hold the ON/OFF button for 2-5 seconds; when the light behind the PIR lens blinks BLUE, release the button.
 - ii. Open the Leviton Smart Sensor App and connect to the device.
 - iii. The device can also be found by scanning for nearby devices; devices can be identified in the app to confirm you are connected to the right sensor.
 - b. Use the Leviton Smart Sensor App to:
 - i. Set operating mode to Auto ON / Auto OFF (default) or Manual ON / Auto OFF.
 - ii. Adjust the sensitivity of the sensor to increase or decrease field of view coverage area pending the room size (100% for larger spaces approaching 1100 sq ft).
 - iii. Adjust timeouts (amount of time lights/load will turn OFF after occupancy is no longer detected).
 - iv. Activate the night light and its operating mode; selection of custom night light color.
 - v. Add daylighting and select target levels for daylighting.
 - vi. Set a security code to lock configuration.
 - vii. See Leviton Smart Sensor App for additional settings and other programming options.
2. If the installer does not have access to a Bluetooth enabled Android or iOS Device, popular preset product configuration can also be made using simple push button commands:
 - a. If wall plate is attached, remove first. With the wallplate removed, pinch sides of sensor near bottom tabs to release front cover of sensor.
