The Cassini-Huygens Mission Christopher T. Russell, 2005-03-03 The joint NASA ESA Cassini Huygens mission is a splendid example of how international cooperation can produce a wealth of scientific return that could not be afforded by the programs of any partner alone ESA contributed the Titan atmosphere entry probe and NASA the orbiter spacecraft the launch and operations Various national agencies contributed to the payloads of both the orbiter and the entry probe Cassini will return much more information than the Galileo mission While Saturn is further from the Sun than Jupiter with less illumination and a colder environment Saturn's weaker radiation belt permits longer periods of observation close to Saturn than were possible with Galileo at Jupiter Cassini provides shorter period orbits closer images of the rings and the atmosphere and many more satellite encounters in fact 44 encounters with Saturn's largest moon Titan in the first four years in orbit This greater number of observations provides a rich scientific bonanza for the remote sensing instruments on Cassini This book is the third and last volume of this compendium on the Cassini Huygens mission This volume describes the remote sensing investigations on the Cassini orbiter radio science radar visible and near infrared spectroscopy far infrared spectroscopy ultraviolet spectroscopy and visible imagery This book is of interest to all potential users of the Cassini Huygens data to those who wish to learn about the planned scientific return from the Cassini Huygens mission and those curious about the processes occurring on this most fascinating planet *The Cassini-Huygens Mission* C.T. Russell, 2005-03-03 The joint NASA ESA Cassini Huygens mission promises to return four and possibly more years of unparalleled scientific data from the solar system's most exotic planet the ringed gas giant Saturn Larger than Galileo with a much greater communication bandwidth Cassini can accomplish in a single flyby what Galileo returned in a series of passes Cassini explores the Saturn environment in three dimensions using gravity assists to climb out of the equatorial plane to look down on the rings from above to image the aurora and to study polar magnetospheric processes such as field aligned currents Since the radiation belt particle fluxes are much more benign than those at Jupiter Cassini can more safely explore the inner regions of the magnetosphere The spacecraft approaches the planet closer than Galileo could and explores the inner moons and the rings much more thoroughly than was possible at Jupiter This book is the second volume in a three volume set that describes the Cassini Huygens mission This volume describes the in situ investigations on the Cassini orbiter plasma spectrometer ion and neutral mass spectrometer energetic charged and neutral particle spectrometer magnetometer radio and plasma wave spectrometer and the cosmic dust analyzer This book is of interest to all potential users of the Cassini Huygens data to those who wish to learn about the planned scientific return from the Cassini Huygens mission and those curious about the processes occurring on this most fascinating planet A third volume describes the remote sensing investigations on the orbiter
