First Things First

The essence of the Panel's message is to *put first things first*. There are six elements, expressed compactly here, but in greater detail later.

- The mathematics curriculum in Grades PreK–8 should be streamlined and should emphasize a well-defined set of the most critical topics in the early grades.
- Use should be made of what is clearly known from rigorous research about how children learn, especially by recognizing a) the advantages for children in having a strong start; b) the mutually reinforcing benefits of conceptual understanding, procedural fluency, and automatic (i.e., quick and effortless) recall of facts; and c) that effort, not just inherent talent, counts in mathematical achievement.
- Our citizens and their educational leadership should recognize mathematically knowledgeable classroom teachers as having a central role in mathematics education and should encourage rigorously evaluated initiatives for attracting and appropriately preparing prospective teachers, and for evaluating and retaining effective teachers.
- Instructional practice should be informed by high-quality research, when available, and by the best professional judgment and experience of accomplished classroom teachers. High-quality research does not support the contention that instruction should be either entirely “student-centered” or “teacher-directed.” Research indicates that some forms of particular instructional practices can have a positive impact under specified conditions.
- NAEP and state assessments should be improved in quality and should carry increased emphasis on the most critical knowledge and skills leading to Algebra.
- The nation must continue to build capacity for more rigorous research in education so that it can inform policy and practice more effectively.

Positive results can be achieved in a reasonable time at accessible cost, but a consistent, wise, community-wide effort will be required. Education in the United States has many participants in many locales—teachers, students, and parents; state school officers, school board members, superintendents, and principals; curriculum developers, textbook writers, and textbook editors; those who develop assessment tools; those who prepare teachers and help them to continue their development; those who carry out relevant research; association leaders and government officials at the federal, state, and local levels. All carry responsibilities. All are important to success.

The network of these participants is linked through interacting national associations. A coordinated national approach toward improved mathematics education will require an annual forum of their leaders for at least a decade. The Panel recommends that the U.S. Secretary of Education take the lead in

Foundations for Success Department of Education, Washington, DC.,2008 On March 13 2008 the National Mathematics Advisory Panel submitted its Final Report to the President of the United States and the Secretary of Education and it was officially released to the public on that date as well The Panel agrees that the delivery system in mathematics education the system that translates mathematical knowledge into value and ability for the next generation is broken and must be fixed This is not a conclusion about any single element of the system It is about how the many parts do not now work together to achieve a result worthy of this country s values and ambitions In this report the Panel suggest that America has genuine opportunities for improvement in mathematics education This report lays out many concrete steps that can be taken now toward significantly improved mathematics education the essence of the Panel s message is to put first things first The six recommendations for making improvements include

- 1 The mathematics curriculum in Grades PreK 8 should be streamlined and should emphasize a well defined set of the most critical topics in the early grades
- 2 Use should be made of what is clearly known from rigorous research about how children learn especially by recognizing a the advantages for children in having a strong start b the mutually reinforcing benefits of conceptual understanding procedural fluency and automatic i e quick and effortless recall of facts and c that effort not just inherent talent counts in mathematical achievement
