behaviors can be actively designed in urban settings The Research Topic at hand uses a transactional approach where an affordance can be understood as a non deterministic in situ precondition for a human activity enabled by relations between abilities of an individual with features of an environment We encourage a broad definition of the concept of affordances where the environment must not be restricted to the material biophysical environment alone but also could be combined with social immaterial features We see that the transactional approach of this Research Topic posits that meaning arises in relations between humans and their environment that it will be equally applicable to natural and designed environments and that it doesn t regard dichotomies like city contra nature or social contra ecological Hence this Research Topic is interested in if the transactional approach can be used as a conceptual tool not only for promotion of mental physical and social health in cities but simultaneously for unraveling relations at the micro scale in cities which can be used for solutions that also promote a healthy Biosphere
