**Gender and Fair Assessment** Warren W. Willingham,Nancy S. Cole,2013-12-16 There have been many important changes in the participation of women and men in American society over the past quarter century Tests play a role in those changes by providing evidence of the diverse achievement and proficiency of women and men They aid the learning process and reflect inequalities in opportunity to learn and participate In addition they provide useful information in considering what alternatives in education and work make most sense for individuals and influence views about groups of students educational programs and a wide range of issues For all of these reasons it is important that tests assess fairly and reflect accurately the ways young people are and are not achieving as well as desired The test performance of women and men is a research topic of historical interest and has received much attention in recent years Because of this increased interest there is a great deal of new research and data available The purpose of the study presented in this volume was to review this new information with two objectives in mind to clarify patterns of gender difference and similarity in test performance and related achievements and to see what implications those findings might have for fair assessment and as a corollary examine the assessment process as a possible source of gender differences This study is interested in tests used in education to assess developed knowledge and skill In order to gain a broader view of gender similarity and difference the contributors looked at other types of measures and other characteristics of young women and men Their hope is to contribute to a firmer basis for insuring fairness in tests an objective which is particularly important as the field moves increasingly to new forms of assessment in which there is less experience

Towards Gender Equity in Mathematics Education Gila Hanna,2006-04-11 THE REAL WORLD OF MATHEMATICS SCIENCE AND TECHNOLOGY EDUCATION In this Preface I would like to focus on what I mean by education and speak about the models and metaphors that are used when people talk write and act in the domain of education We need to look at the assumptions and processes that the models and metaphors implicitly and explicitly contain I feel we should explore whether there is a specific thrust to mathematics education in the here and now and be very practical about it For me education is the enhancement of knowledge and understanding and there is a strong and unbreakable link between the two There seems little point in acquiring knowledge without understanding its meaning Nor is it enough to gain a deep understanding of problems without gaining the appropriate knowledge to work for their solution Thus knowledge and understanding are each necessary conditions for the process of education but only when they are linked will the process bear fruit Only in the balanced interplay of knowledge and understanding can we expect to achieve genuine education
