Developments in the Analysis and Design of Marine Structures Jorgen Amdahl,C. Guedes Soares,2021-12-28

Developments in the Analysis and Design of Marine Structures is a collection of papers presented at MARSTRUCT 2021 the 8th International Conference on Marine Structures by remote transmission 7 9 June 2021 organised by the Department of Marine Technology of the Norwegian University of Science and Technology Trondheim Norway and is essential reading for academics engineers and professionals involved in the design of marine and offshore structures The MARSTRUCT Conference series deals with Ship and Offshore Structures addressing topics in the fields of Methods and Tools for Loads and Load Effects Methods and Tools for Strength Assessment Experimental Analysis of Structures Materials and Fabrication of Structures Methods and Tools for Structural Design and Optimisation and Structural Reliability Safety and Environmental Protection The MARSTRUCT conferences series of started in Glasgow UK in 2007 the second event of the series took place in Lisbon Portugal in March 2009 the third in Hamburg Germany in March 2011 the fourth in Espoo Finland in March 2013 the fifth in Southampton UK in March 2015 the sixth in Lisbon Portugal in May 2017 and the seventh in Drubovnik Croatia in May 2019 The Proceedings in Marine Technology and Ocean Engineering series is dedicated to the publication of proceedings of peer reviewed international conferences dealing with various aspects of Marine Technology and Ocean Engineering The Series includes the proceedings of the following conferences the International Maritime Association of the Mediterranean IMAM conferences the Marine Structures MARSTRUCT conferences the Renewable Energies Offshore RENEW conferences and the Maritime Technology MARTECH conferences The Marine Technology and Ocean Engineering series is also open to new conferences that cover topics on the sustainable exploration and exploitation of marine resources in various fields such as maritime transport and ports usage of the ocean including coastal areas nautical activities the exploration and exploitation of mineral resources the protection of the marine environment and its resources and risk analysis safety and reliability The aim of the series is to stimulate advanced education and training through the wide dissemination of the results of scientific research

Innovations in Impact and Blast Protections Yonghui Wang,Xudong Zhi,Ximei Zhai, Jiachuan Yan,Rong Zhang,2022-08-23

This book develops several novel foam filled structures and steel concrete steel SCS sandwich structures which provides more alternatives for ensuring the safety of buildings and infrastructures under extreme loading like impact and blast In the first part of this book the aluminium foam and polyurethane foam filled structures have been developed for dissipating impact and blast energy Experimental and numerical studies have been conducted to obtain their behaviours under impact loading In addition analytical models have also been proposed to assess their energy absorption performances and facilitate the impact and blast design when using the proposed foam filled structures In the second part of this book SCS sandwich structures with novel shear connectors have been developed and their behaviours under impact and blast loading have been experimentally numerically and analytical studied

Analytical models for predicting the impact and blast responses of SCS sandwich structures have also been developed In the third part of this book a new steel polyurethane foam steel concrete steel SPUFSCS panel i e the combination of foam material and SCS panel has been developed to achieve a higher impact resistant capacity Owing to the increasing impact and blast threats on buildings and infrastructures the studies presented in this book are of significant importance for providing several new solutions for impact and blast enhancement

Advanced Fibrous Composite Materials for Ballistic Protection Xiaogang Chen,2025-08-01 Advanced Fibrous Composite Materials for Ballistic Protection Second Edition provides the latest information on ballistic protection a topic that remains an important issue in modern times due to ever increasing threats coming from regional conflicts terrorism and anti social behavior The basic requirements for ballistic protection equipment are first and foremost to prevent the projectile from perforating the armor and to reduce blunt trauma to the human body caused by ballistic impact The equipment also needs to be thermal and provide moisture comfort and lightweight and flexible to guarantee the wearer s mobility The main aim of this fully updated edition is to present some of the most recent research developments in the design and engineering of woven fabrics and their use as layering materials to form composite structures for ballistic personal protection This book will be a valuable reference for materials scientists and textile technologists ballistic scientists manufacturers engineers and all those working in ballistics technology Includes high velocity impact studies on STF impregnated ballistic panels Covers engineering and ballistic performance analysis of military and police helmets reinforced by single piece fabrics Provides the latest developments in Aramid and ultra high molecular weight polyethylene UHMWPE fibers Presents additional information on the analysis of reinforcement structure ply structure woven and UD and panel structure 2D 3D angle arranged plies on ballistic performance Highlights approaches of use of materials inter fiber friction quasi isotropic panel formation and hybrid panel engineering

Compression of an array of similar crash test simulation results Stefan Peter Müller,2022-02-08 Big data thrives on extracting knowledge from a large number of data sets But how is an application possible when a single data set is several gigabytes in size The innovative data compression techniques from the field of machine learning and modeling using Bayesian networks which have been theoretically developed and practically implemented here can reduce these huge amounts of data to a manageable size By eliminating redundancies in location time and between simulation results data reductions to less than 1% of the original size are possible The developed method represents a promising approach whose use goes far beyond the application example of crash test simulations chosen here

Production at the leading edge of technology Jens Peter Wulfsberg,Wolfgang Hintze,Bernd-Arno Behrens,2019-11-23 The focus of the Congress will be leading edge manufacturing processes Topics include manufacturing at extreme speed size accuracy methodology use of resources interdisciplinarity and more Contributions from production and industrial engineering are welcome Challenges from the areas of manufacturing machines and production systems will be addressed Production research constantly pushes the boundaries of what is feasible The

Congress Production at the leading edge of technology will highlight production processes that are advancing into areas that until recently were considered unfeasible also in terms of methodology use of resources and interdisciplinarity But where does the search for new limits lead Which limitations do we still have to overcome which ones do we not want to overcome The aim of the German speaking colloquium is to establish connections between the research locations and to intensify the overall transfer of results and experience with industrial users Computational Intelligence Juan Julián Merelo,Jonathan Garibaldi,Alejandro Linares-Barranco,Kevin Warwick,Kurosh Madani,2021-07-01 This present book includes a set of selected revised and extended versions of the best papers presented at the 11th International Joint Conference on Computational Intelligence IJCCI 2019 held in Vienna Austria from 17 to 19 September 2019 The authors focus on three outstanding fields of Computational Intelligence through the selected panel namely Evolutionary Computation Fuzzy Computation and Neural Computation Besides presenting the recent advances of the selected areas the book aims to aggregate new and innovative solutions for confirmed researchers and on the other hand to provide a source of information and or inspiration for young interested researchers or learners in the ever expanding and current filed of Computational Intelligence It constitutes a precious provision of knowledge for individual researchers as well as represents a valuable sustenance for collective use in academic libraries of universities and engineering schools relating innovative techniques in various fields of applications

On the anisotropic plastic behaviour of short fibre reinforced thermoplastics and its description by phenomenological material modelling Felix Dillenberger,2019-10-21 A requirement for the safe design of thermoplastic parts is the ability to precisely predict mechanical behaviour by finite element simulations Typical examples include the engineering of relevant components in automotive applications For this purpose adequate material models are essential In this context the present work introduces a material modelling approach for short fibre reinforced thermoplastics SFRTs SFRT parts are processed cost effectively by injection moulding and show a varying degree of anisotropy due to the locally inhomogeneous fibre distributions that arise during the moulding process The presented material model considers linear elastic behaviour and non linear orthotropic stress state dependent viscoplastic deformation for arbitrary fibre distributions The constitutive equations are verified with the experiments of a PPGF30 material regarding different stress states and orientations *Computer Aided Engineering of Batteries* Shriram Santhanagopalan,2023-03-14 This edited volume with contributions from the Computer Aided Engineering for Batteries CAEBAT program provides firsthand insights into nuances of implementing battery models in actual geometries It discusses practical examples and gaps in our understanding while reviewing in depth the theoretical background and algorithms Over the last ten years several world class academics automotive original equipment manufacturers OEMs battery cell manufacturers and software developers worked together under an effort initiated by the U S Department of Energy to develop mature validated modeling tools to simulate design performance safety and life of automotive batteries Until recently battery modeling was a niche focus area with a relatively

small number of experts This book opens up the research topic for a broader audience from industry and academia alike It is a valuable resource for anyone who works on battery engineering but has limited hands on experience with coding

Dutton's Orthopaedic: Examination, Evaluation and Intervention Fourth Edition Mark Dutton,2016-07-29

Updated edition of the 1 orthopaedic evidence based textbook and reference guide A Doody's Core Title for 2019 Dutton's Orthopaedic Examination Evaluation and Intervention provides readers with a systematic logical approach to the evaluation and intervention of the orthopedic patient In this comprehensive and up to date fourth edition Dutton strikes the perfect balance in its coverage of examination and treatment The textbook emphasizes the appropriate use of manual techniques and therapeutic exercise while outlining the correct applications of electrotherapeutic and thermal modalities as adjuncts to the rehabilitative process The content reflects the consistent unified voice of a single author a prominent practicing therapist who delivers step by step guidance on the examination of each joint and region This in depth coverage leads you logically through systems review and differential diagnosis aided by decision making algorithms features new coverage on balance and concussions New videos on testing and method techniques are available on AccessPT if adopted Also this edition has added 10 15 board review questions per chapter and has updated chapters to reflect the latest research and treatment techniques LS-DYNA Examples Manual John D. Pratomo,2023-09-23 This book emerged due to the lack of references in the community about basic things using finite element method software LS DYNA and LS PrePost Whereas lots of engineering cases that can be solved using this software The main highlight of this book is the cases that involve large deformations such as a crash box of vehicles or an impact of bullets These analyses can be applied in unlimited topic such as transportation aircraft defense and so on For example in defense application this simulations can be used to design bullet protection plate and also evaluate the anti ballistic performance without doing experiments that are usually very expensive and time consuming Therefore with this simulation we can carry out the design process more cheaply and faster This book contains detailed procedures for using LS DYNA and LS PrePost for cases of low speed collisions such as crash box impact up to high speed impact of a bullet Cases such as armor for combat vehicles to military standard buildings can use the method described in this book Other cases such as the bullet tip design can also be evaluated Thus the method in this book can also be adopted for other broader analyses 6.
