with international focus **Teaching for Learning and Learning for Teaching** Christopher Kloppe, Steve

Drew, 2015-10-30 Teaching for Learning and Learning for Teaching focuses on the emerging global governmental and
institutional agenda about higher education teaching quality and the role that peer review can play in supporting
improvements in teaching and student outcomes This agenda is a pervasive element of the further development of higher
education internationally through activities of governments global agencies institutions of higher education discrete
disciplines and individual teachers Many universities have adopted student evaluations as a mechanism to appraise the
quality of teaching These evaluations can be understood as providing a customer centric portrait of quality and when used as
the sole arbiter of teaching performance they do not instill confidence in the system of evaluation by academic teaching staff
Providing peer perspectives as counterpoint whether in a developmental or summative form goes some way to alleviating this
imbalance and is the impetus for the resurgence of interest in peer review and observation of teaching This book seeks to
recognise cases of peer review of teaching in Higher Education to affirm best practices and identify areas that require
improvement in establishing local national and international benchmarks of teaching quality **Safety and Reliability -**

Pickard, Serge H. Ahmed, Bennett Foddy, 2015-12-07 For much of the 20th century theories of addictive behaviour and motivation were polarized between two models The first model viewed addiction as a moral failure for which addicts are rightly held responsible and judged accordingly The second model in contrast viewed addiction as a specific brain disease caused by neurobiological adaptations occurring in response to chronic drug or alcohol use and over which addicts have no choice or control As our capacity to observe neurobiological phenomena improved the second model became scientific orthodoxy increasingly dominating addiction research and informing public understandings of addiction More recently however a dissenting view has emerged within addiction research based partly on new scientific research and partly on progress in philosophical and psychological understandings of relevant mental phenomena This view does not revert to treating addiction as a moral failure but nonetheless holds that addictive behaviour is fundamentally motivated by choice and subject to at least a degree of voluntary control On this alternative model of addiction addictive behaviour is an instrumental means to ends that are desired by the individual although much controversy exists with respect to the rationality or irrationality of these ends the degree and nature of the voluntary control of addictive behaviour and motivation the explanation of the difference between addictive and non addictive behaviour and motivation and lastly the extent to which addictive behaviour and motivation is correctly characterised as pathological or diseased This research topic includes papers in the traditions of neuroscience psychology philosophy law and social science that explore alternative understandings of addiction
