**John Laband**

### **Isizulu Grade 1 November 2013 P:**

*Zulu Warriors* John Laband, 2014-05-27 Toward the end of the nineteenth century the British embarked on a concerted series of campaigns in South Africa. Within three years they waged five wars against African states with the intent of destroying their military might and political independence and unifying southern Africa under imperial control. This is the first work to tell the story of this cluster of conflicts as a single whole and to narrate the experiences of the militarily outmatched African societies. Deftly fusing the widely differing European and African perspectives on events, John Laband details the fateful decisions of individual leaders and generals and explores why many Africans chose to join the British and colonial forces. The Xhosa, Zulu, and other African military cultures are brought to vivid life, showing how varying notions of warrior honor and manliness influenced the outcomes for African fighting men and their societies. *Drawing for Science Education* Phyllis Katz, 2017-03-23 This book argues for the essential use of drawing as a tool for science teaching and learning. The authors are working in schools, universities, and continual science learning (CSL) settings around the world. They have written of their experiences using a variety of prompts to encourage people to take pen to paper and draw their thinking, sometimes direct observation and in other instances their memories. The result is a collection of research and essays that offer theory, techniques, outcomes, and models for the reader. Young children have provided evidence of the perceptions that they have accumulated from families and the media before they reach classrooms. Secondary students describe their ideas of chemistry and physics. Teacher educators use drawings to consider the progress of their undergraduates' understanding of science teaching and even their moral/ethical responses to teaching about climate change. Museum visitors have drawn their understanding of the physics of how exhibit sounds are transmitted. A physician explains how the history of drawing has been a critical tool to medical education and doctor/patient communications. Each chapter contains samples, insights, and where applicable, analysis techniques. The chapters in this book should be helpful to researchers and teachers alike across the teaching and learning continuum. The sections are divided by the kinds of activities for which drawing has historically been used in science education. An instance of observation: Audubon, Linnaeus. A process: how plants grow over time, what happens when chemicals combine. Conceptions of what science is and who does it. Images of identity development in science teaching and learning.
