*Water, Cryosphere, and Climate Change in the Himalayas* Ajay Kumar Taloor,Bahadur Singh Kotlia,Kireet  
Kumar,2021-04-24 This edited book summarizes numerous research studies on remote sensing and GIS of natural resource  
management for the Himalaya region done by Indian Institutions and Universities over the last decade It gives an overview of  
hydrometeorological studies on Himalayan water resources and addresses concerns in the development of water resources in  
this region which is dealing with an increased pressure in population industrialization and economic development While the  
source of some of the major rivers of India are found in the Himalayas the glaciers and water bodies in the region are  
continuously shrinking leading to a depletion of water and deterioration of water quality This is affecting a population of up  
to 2.5 billion people The ecosystems have been under threat due to deforestation loss of biodiversity expansion of agriculture  
and settlement overexploitation of natural resources habitat loss and fragmentation poaching mining construction of roads  
and large dams and unplanned tourism Spaceborne remote sensing with its ability to provide synoptic and repetitive  
coverage has emerged as a powerful tool for assessment and monitoring of the Himalayan resources and phenomena This  
work serves as a resource to students researchers scientists professionals and policy makers both in India and on a global
